The International Jute Commodity System Chhabilendra Roul, 2009 The jute commodity system as prevalent in the Indian subcontinent is a conglomeration of paradoxes Jute was once called the golden fibre on account of its contribution to means of livelihood to millions of farmers traders manufacturers in the unorganized sector mill workers in the organized sector as well scores of people employed in the service sector relating to trading manufacturing and exports of jute and jute goods Jute industry along with textile manufacturing provided the foundation of modern manufacturing industry in India Simultaneously this industry was also the fountain head of the growth of private entrepreneurship and capital in India Most of the traditional Industrial Houses in India grew out of trading and manufacturing of jute and jute goods coal and tea On the other hand most of the farmers involved in cultivation of natural fibres like jute are small and marginal farmers Without alternative avenues of gainful employment elsewhere these millions in South Asia would be deprived of a part of their livelihood The entire commodity chain of natural fibres is characterized by low productivity low value addition high volumes and low returns The advent and discovery of mineral oil helped exploit cheap HDPE and PP polyethylene sacks which started replacing the natural fibre based packaging materials As a result the jute industry got wiped out from Europe America and the Far East Today it has survived in the Indian subcontinent and to a lesser extent in Brazil The unique feature of the volume is that it focuses on the first hand experience of the policy makers and other stakeholders in the jute commodity system who are

confronted with a dilemma of reviving a declining economic subsector At this juncture when there is need for a Commodity Development Strategy suitable to the ethos of a commodity like the jute fibre the present volumes attempts to devise such a strategy thorough analysis of the system based on authentic and up to date information The Book furnishes an erudite analysis and stock taking of the jute commodity system This analysis points out to the fact that there is a need for a holistic systemic approach to the problems being faced by this sector focusing on the economic exploitation of the whole jute plant holistic research for addressing productivity and processing efficiency in the entire commodity chain of jute and creating a network of organisations for advocacy for jute and allied fibres which would focus on repositioning the golden fibre as sustainable and eco friendly commodity with the help of green and sustainable development advocacy groups The Commodity Development Strategy highlights the need for greater effort for significant degree of product diversification which would entail significant consumption of the fibre or fabric in volume terms The volume ends with an optimistic note with ideas of inclusive development under the Millennium Development Goals and Carbon Credits Sustainable Development under the United Nations Framework Convention on Climate Change the welcome paradigm shifts in the approach to the jute sector The effort by Sh Roul is a timely one on the eve of the observance of 2009 as International Year for Natural Fibres by the United Nations The book is quite comprehensive with its focus on a wide range of issues pertaining to the jute agri commodity system addressed against a historical background and from macro economic analytical perspective The volume offers stimulating reading for those interested in the dynamics of agricultural commodity systems like jute and allied fibres The book is expected to help sensitise national governments international organizations and nongovernmental organizations towards the eco sustainability of jute as a natural fibre The book can serve as an excellent reference book for post graduate students in economics jute and textiles management development studies regional development and agriculture and agro marketing Guide to Sources for Agricultural and Biological Research J. Handbook of Sustainable Luxury Textiles and Fashion Miguel Angel Gardetti, Subramanian Senthilkannan

Muthu, 2015-08-10 The first volume of this handbook explores different aspects of sustainable luxury textiles and fashion broadly based on the following topics Sustainability and business management Value chain management Use of materials and Sustainable production processes *Natural Fiber* Han-Yong Jeon, 2022-11-02 Unlike synthetic fibers that have undergone chemical processing natural fibers are superior in aesthetics and comfort However because they come from nature their supply is inconsistent and it is difficult to control their production Natural fibers are popular because they are generally environmentally friendly and durable and have a strong affinity for water and thus have high absorbency Through chemical modification or processing natural fibers can be developed for medical health sanitation and industrial uses This book discusses natural fibers and how they can be manipulated and modified for practical applications in a variety of industries

Textile Production in Pre-Roman Italy Margarita Gleba, 2008-11-05 Older than both ceramics and metallurgy textile

production is a technology which reveals much about prehistoric social and economic development This book examines the archaeological evidence for textile production in Italy from the transition between the Bronze Age and Early Iron Ages until the Roman expansion 1000 400 BCE and sheds light on both the process of technological development and the emergence of large urban centres with specialised crafts Margarita Gleba begins with an overview of the prehistoric Appennine peninsula which featured cultures such as the Villanovans and the Etruscans and was connected through colonisation and trade with the other parts of the Mediterranean She then focuses on the textiles themselves their appearance in written and iconographic sources the fibres and dyes employed how they were produced and what they were used for we learn for instance of the linen used in sails and rigging on Etruscan ships and of the complex looms needed to produce twill Featuring a comprehensive analysis of textiles remains and textile tools from the period the book recovers information about funerary ritual the sexual differentiation of labour the spinners and weavers were usually women and the important role the exchange of luxury textiles played in the emergence of an elite Textile production played a part in ancient Italian society's change from an egalitarian to an aristocratic social structure and in the emergence of complex urban communities Operation and Diagnostics of Machines and Production Systems Operational States III Tibor Krenický, Juraj Ružbarský, Anton Panda, 2015-10-19 Special topic volume with invited peer reviewed papers only Multiscale Textile Preforms and Structures for Natural Fiber Composites Mohamad Midani, Tamer Hamouda, Ahmed H. Hassanin, Abdel-Fattah M. Seyam, 2023-07-10 Textile reinforcement forms preforms play an important role in determining the properties of the final composite and product The preform formation process provides precise control of the fiber architecture and orientation using a suitable textile manufacturing technique While the techniques employed for preparing glass and carbon preforms are well known there is still a gap in understanding on how to prepare natural preforms for composite reinforcements Multiscale Textile Preforms and Structures for Natural Fiber Composites will bridge this gap by presenting unified knowledge on the relevant preform preparation techniques and resulting fiber architectures Emphasis is on the structural parameters of each preform and their effect on the final composite properties This book assembles information and knowledge on natural fiber reinforcement forms including conventional forms such as spun yarn woven knitted nonwoven braided and comingled These are illustrated and classified into one two and three dimensional reinforcements This book also includes information on nonconventional preform formation techniques such as unidirectional tapes pre impregnated preforms spread tows and tailored fiber placement Covers all relevant textile processing technology for natural fiber preforms Provides academic researchers with a better understanding of recent practices in preparing textile reinforcements for natural fiber composites Helps practitioners determine how to use natural fiber reinforcements in producing new sustainable and innovative composites **Handbook of Textile Fibre Structure** Stephen Eichhorn, J. W. S. Hearle, M Jaffe, T Kikutani, 2009-10-26 Due to their complexity and diversity understanding the structure of textile fibres is of key importance This authoritative two

volume collection provides a comprehensive review of the structure of an extensive range of textile fibres Volume 2 begins by reviewing natural fibres such as cellulosic cotton protein wool and silk fibres Part two considers regenerated cellulosic protein alginate chitin and chitosan fibres The final part of the book discusses inorganic fibres such as glass carbon and ceramic fibres as well as specialist fibres such as thermally and chemically resistant fibres optical and hollow fibres Chapters review how fibre structure contributes to key mechanical properties A companion volume reviews the structure of manufactured polymer fibres Edited by leading authorities on the subject and with a team of international authors the two volumes of the Handbook of textile fibre structure is an essential reference for textile technologists fibre scientists textile engineers and those in academia Discusses how fibre structure contributes to key mechanical properties Reviews natural fibres such as cellulosic cotton and silk fibres and considers various regenerated fibres Examines inorganic fibres including glass and carbon as well as specialist fibres such as chemically resistant and optical fibres
