**Basic Mechanisms of Solar Activity** V. Bumba, J. Kleczek, 2012-12-06 Our first attempt to organize a Symposium on solar activity was made at the IAO General Assembly in Brighton 1970 There at the session of Commission 10 we proposed to organize a Symposium which would stress the observational aspects of solar activity It was our hope that such a Symposium might stimulate studies of those important problems in solar physics which for a long time had been neglected in overall scientific discussion Although a provisional date for the Symposium was then decided it did not take place to avoid overlapping with other IAO activities At the session of Commission 10 in Sydney on the occasion of the XVth IAO General Assembly in 1973 we repeated our proposal and forwarded the invitation of the Czechoslovak Academy of Sciences to organize the Symposium in Prague Both were accepted During the discussions about the programme of the Symposium enthusiastically promoted by the late president of Commission 10 Prof K O Kiepenheuer it was decided to change slightly its subject The theoretical problems were stressed and the majority of the Scientific Organizing Committee agreed not to deal with short lived phenomena of the solar activity or with individual active regions Symposium No 71 was held in Prague from August 25 to August 29 1975 Its Organizing Committee consisted of V Bumba Chairman W Deinzer R G Giovanelli R Howard K O Kiepenheuer M Kopecky T Krause M Kuperus G Government-wide Index to Federal Research & Development Reports, 1966 **Basics of the Solar Wind** Nicole Meyer-Vernet, 2007-01-18 The Sun continually ejects matter into space blowing a huge bubble of supersonic plasma This solar wind bathes the whole solar system and shapes all planetary environments The growth of space technology has considerably increased our knowledge of this medium This 2007 book presents an introduction to the subject starting with basic principles and including all the latest advances from space exploration and theory It contains a short introduction to plasma physics and discusses the structure of the solar interior and atmosphere the production of solar wind and its perturbations It explains the objects of the Solar System from dust to comets and planets and their interaction with the solar wind The final sections explore the astrophysical point of view The topics are treated at various levels of difficulty both qualitatively and quantitatively This book will appeal to graduate students and researchers in earth and atmospheric sciences and astrophysics
