Basic Human Neurology:

Basics of Neurology Mr. Rohit Manglik, 2024-06-24 Core concepts of neurological function and disorders for students and early professionals *Interactions between emotions and social context - Basic, clinical and non-human evidence* Maria Ruz, Agustin Ibanez, Sonja A E Kotz, Louise Barrett, Jorge Moll, 2014-07-17 The emotions that we feel and also those that we perceive in others are crucial to the social functioning of both humans and non human animals Although the role of context has been extensively studied in basic sensory processing its relevance for social cognition and emotional processing is little understood In recent years several lines of research at the behavioral and neural levels have highlighted the bidirectional interactions that take place between emotions and social context Experienced emotions even when incidental bias decision making Remarkably even basic emotions can be strongly influenced by situational contexts In addition both humans and non human animals can use emotional expressions strategically as a means of influencing and managing the behavioral response of others in relation to specific environmental situations Moreover social emotions e g engaged in moral judgment empathic concern and social norms seem to be context dependent which also questions a purely abstract account of emotion understanding and expression as well as other social cognition domains The present Research Topic of Frontiers in Human Neuroscience highlights the need for a situated approach to emotion and social cognition We presented theoretical and empirical work at the behavioral and neural levels that contribute to our understanding of emotion within a highly contextualized social realm and vice versa Relevant contributions are presented from diverse fields including ethology neurology biology cognitive and social neuroscience and as well as psychology and neuropsychiatry This integrated approach that entails the interaction between emotion and social context provide important new insights into the growing field of social neuroscience

The Self in Neuroscience and Psychiatry Tilo Kircher, Anthony S. David, 2003-08-07 In recent years the clinical and cognitive sciences and neuroscience have contributed important insights to understanding the self The neuroscientific study of the self and self consciousness is in its infancy in terms of established models available data and even vocabulary However there are neuropsychiatric conditions such as schizophrenia in which the self becomes disordered and this aspect can be studied against healthy controls through experiment building cognitive models of how the mind works and imaging brain states In this 2003 book the first to address the scientific contribution to an understanding of the self an eminent international team focuses on current models of self consciousness from the neurosciences and psychiatry These are set against introductory essays describing the philosophical historical and psychological approaches making this a uniquely inclusive overview It will appeal to a wide audience of scientists clinicians and scholars concerned with the phenomenology and psychopathology of the self

Truong, William Carroll, Roongroj Bhidayasiri, 2011-09-22 A truly global textbook for neurological practice Neurological disease varies in its presentations and pathology throughout the world In today s interconnected world neurologists need to be aware that patients can come from

anywhere in the world with presentations and pathologies that may not be typical of their local context. This unique textbook deals with the differences in etiology, genetics, age of onset, and clinical presentations of neurological disease internationally. This is the first book to take a truly global approach to neurological illness. Consisting of 22 sections and 173 chapters with contributions from experts in many countries, it serves as an invaluable guide for physicians to expand their knowledge of different neurological disorders around the world. More importantly, it is a definitive source of practical information to aid diagnosis and treatment.

Neurology and Kindness David Parkes, 2024-09-15. This book about Medical Ethics, Religion, and Morals goes from the Clinic of Hippocrates under a Plane Tree on the Greek island of Cos to the small one-room Cottage Hospital in Capernaum of the Gospel of St Mark, staffed by two fishermen and Christ, to reach the Maudsley Hospital in London and UCLA in California. The book explores the brain-mind interface. Do the Mechanics of Neurology and the Mind of Kindness come from the same or different material? Are they similar or different in essence? The question was asked by Plato in ancient Greece, later by Descartes in France, in the twenty-first century in the Higher Cortical Functions of neuropsychologist Alexander Luria in Russia, Adam Zeman's Consciousness in Edinburgh, and by Oliver Sacks in the New York Review of Books. Neurology and Kindness deals with Neurology, Brain, Mind, and the innate human quality of Kindness, reinforced by the Love of Christianity, the Charity of Islam, the Duty of Judaism. It is written as a handbook for Nurses, Doctors, and also the Church, all who care for and help the sick.

These diseases include common conditions such as multiple sclerosis, the Guillain Barre syndrome and myasthenia gravis. The introductory chapters on antigen recognition and self nonself recognition and neuroimmunology are followed by chapters on specific diseases. These are presented in a standardised format with sections on clinical features, genetics, neuropathology, pathophysiology, immunology and therapy. Each chapter has a concluding section which summarises key points and suggests directions for future research. Animal models of autoimmune neurological disease are also covered in detail because of their importance in understanding the human diseases. Report of the Panel on Neurological Aspects of Behavior to the National Advisory Neurological and Communicative Disorders and Stroke Council National Advisory Neurological and Communicative Disorders and Stroke Council (U.S.). Panel on Neurological Aspects of Behavior, 1979 **Neurological, Psychiatric, and Developmental Disorders** Institute of Medicine, Board on Global Health, Committee on Nervous System Disorders in Developing Countries, 2001-02-01 Brain disorders, neurological, psychiatric and developmental now affect at least 250 million people in the developing world and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.
