The Importance of Technical Communication

INTRODUCTION

In your academic environment, you encounter various situations involving speech or writing: conversation with your friends, professors, or office staff to achieve various purposes; seminars, group discussions, written tests, and examinations; and laboratory or project report submissions on diverse topics. Likewise, when you take up a profession after completing your studies, you will have to interact with your superiors and subordinates, conversing with them face to face or over the telephone, and read and write e-mails, letters, reports, and proposals.

All these activities have a common denominator—the *sharing of information*. For example, when you request your professor to explain a concept which you could not understand very well in the class, you transmit the information to him that you need some clarification. The professor receives this information, understands it, and responds by giving an explanation that clears your doubt. If you are satisfied with this explanation, you thank the professor and the communication comes to an end. If you are still in doubt, you seek a clarification again, and the process continues. This process involving the transmission and interchange of ideas, facts, feelings, or courses of action is known as the *process of communication*. You give, get, or share information with others during this process. Whether you communicate orally or in writing, this process essentially remains the same.

When you become a part of any organization, you need to communicate, and communicate effectively. No organization can survive without communication. All the activities that an organization undertakes have communication at their hub. The better your communication skills, the greater are your chances of quick progress. However skilful you may be in other aspects of your work; knowledge, thoughts, and organization sans communication are of little use. For instance, although you may possess an excellent academic record, yet you may not emerge successful in an interview if you are not able to express your ideas clearly to those on the other side of the table. You may have observed that people at the pinnacle of their profession

every training and development professional *STEM English in Japan* Glen Hill, Joseph Falout, Matthew Apple, 2022-11-30

This book focuses on Japanese science technology engineering and mathematics STEM students and their experiences of learning English Students majoring in STEM face unique circumstances regarding their English language education Despite the global use of English in these fields the authors argue that Japanese STEM students fail to take advantage of coursework extracurricular materials teachers peers and other resources to raise their communicative abilities to a sufficient level for the workplace This book offers insights into how STEM students can learn English more effectively and purposefully The chapters provide firsthand perspectives into the psychologies educational programs and future workplace situations of Japanese STEM students who are the innovators inventors and researchers of the future This book will appeal to applied linguists and language teachers wherever STEM English is taught Remedial Mathematics , **Encyclopedia of Science and Technology Communication** Susanna Hornig Priest, 2010-07-14

The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication

programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics
