Abstract

The distinguishing number $D(G)$ of a graph G is the least integer d such that there is a d -labeling of the vertices of G which is not preserved by any nontrivial automorphism. For a graph G let G^r be the r th power of G with respect to the Cartesian product. It is proved that $D(G^r) = 2$ for any connected graph G with at least 3 vertices and for any $r \geq 3$. This confirms and strengthens a conjecture of Albertson. Other graph products are also considered and a refinement of the Russell and Sundaram motion lemma is proved.

1. Introduction

A labeling $\ell : V(G) \rightarrow \{1, \dots, d\}$ of a graph G is d -distinguishing if no nontrivial automorphism of G preserves the labeling. Such a labeling thus uniquely identifies vertices of G , that is, vertices are “distinguished” among themselves. The *distinguishing number*, $D(G)$, of a graph G , is the minimum d such that G has a d -distinguishing labeling.

Uncorrected Proof Robert Klein Engler, 2010-12-11 Poetry essays and fiction by one of America's best poets Some poems and essays appear here for the first time Bach Interpretation John Butt, 1990-06-29 A comprehensive assessment of J S Bach's use of articulation marks i e slurs and dots in the large body of primary sources *Rethinking Bach* Bettina Varwig, 2021 Johann Sebastian Bach has loomed large in the imagination of scholars performers and audiences since the late nineteenth century This new book edited by veteran Bach scholar Bettina Varwig gathers a diverse group of leading and emerging Bach researchers as well as a number of contributors from beyond the core of Bach studies The book's fifteen chapters engage in active rethinking of different topics connected with Bach the iconic name which broadly encompasses the historical individual the sounds and afterlives of his music as well as all that those four letters came to stand for in the later popular and scholarly imagination In turn challenging the fundamental assumptions about the nineteenth century Bach revival the rise of the modern work concept Bach's music as a code and about editions of his music as monuments Collectively these contributions thus take apart scrutinize dust off and reassemble some of our most cherished narratives and deeply held beliefs about Bach and his music In doing so they open multiple pathways towards exciting future modes of engagement with the composer and his legacy **The Evolution of Music Through Culture and Science** Peter Townsend, Peter David Townsend, 2020 The Evolution of Music by Culture and Science aims to recognise the impact of science on music why it occurs how we respond and even to tentatively see if we can predict future developments Technology has played an immense role in the development of music as it has enabled the production of new sounds introduced new instruments and continuously improved and modified existing ones Printing musical notation and modern computer aids to composition plus recordings and electronic transmission have equally enabled us to have access to music from across the world Such changes whether just more powerful pianos or new sounds as from the saxophone have inspired composers and audiences alike Acoustics and architecture play similar roles as they changed the scale and performance of concert halls and with the advent of electronics they enabled vast pop music festivals No aspect of modern music making has been untouched by the synergy with scientific innovation This is not a one way interaction as the early attempts to make recordings were a major motivating force to design the electronics for amplifiers and these in turn inspired and enabled the designs of semiconductor electronics and modern computer technology To appreciate the impact of technology on music does not require any prior scientific background as the concepts are invariably extremely simple and are presented here without technical detail Understanding music and why we like different genres is far more complex as this involves our personal background and taste Both aspects change with time and there is no contradiction in enjoying items as diverse as baroque madrigals symphonies jazz or pop music or music from totally different cultures **The Paris Agreement on Climate Change** Daniel R. Finding What Works in Health Care Institute of Medicine,Board on Health Care Services,Committee on Standards for Systematic Reviews of Comparative Effectiveness Research,2011-06-20 Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic reviews for the best summary of the evidence Systematic reviews identify select assess and synthesize the findings of similar but separate studies and can help clarify what is known and not known about the potential benefits and harms of drugs devices and other healthcare services Systematic reviews can be helpful for clinicians who want to integrate research findings into their daily practices for patients to make well informed choices about their own care for professional medical societies and other organizations that develop clinical practice guidelines Too often systematic reviews are of uncertain or poor quality There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled how evidence is appraised and the overall scientific rigor of the process In *Finding What Works in Health Care* the Institute of Medicine IOM recommends 21 standards for developing high quality systematic reviews of comparative effectiveness research The standards address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain *Finding What Works in Health Care* also proposes a framework for improving the quality of the science underpinning systematic reviews This book will serve as a vital resource for both sponsors and producers of systematic reviews of
