**Analysis of Arithmetic for Mathematics Teaching** Gaea Leinhardt, Ralph Putnam, Rosemary A. Hattrup, 2020-11-25  
This volume emerges from a partnership between the American Federation of Teachers and the Learning Research and Development Center at the University of Pittsburgh. The partnership brought together researchers and expert teachers for intensive dialogue sessions focusing on what each community knows about effective mathematical learning and instruction. The chapters deal with the research on and conceptual analysis of specific arithmetic topics: addition, subtraction, multiplication, division, decimals, and fractions, or with overarching themes that pervade the early curriculum and constitute the links with the more advanced topics of mathematics: intuition, number sense, and estimation. Serving as a link between the communities of cognitive researchers and mathematics educators, the book capitalizes on the recent research successes of cognitive science and reviews the literature of the math education community as well. *Primary Mathematics: Teaching Theory and Practice* Claire Mooney, Mary Briggs, Alice Hansen, Judith McCullouch, Mike Fletcher, 2018-02-12. With full coverage of the theory and practice required for effective and creative mathematics teaching, this text is an essential guide for all trainees working towards QTS (Qualified Teacher Status). *Constructing Knowledge for Teaching Secondary Mathematics* Orit Zaslavsky, Peter Sullivan, 2011-04-11. Teacher education seeks to transform prospective and/or practicing teachers from neophyte, possibly uncritical perspectives on teaching and learning to more knowledgeable, adaptable, analytic, insightful, observant, resourceful, reflective, and confident professionals ready to address whatever challenges teaching secondary mathematics presents. This transformation occurs optimally through constructive engagement in tasks that foster knowledge for teaching secondary mathematics. Ideally, such tasks provide a bridge between theory and practice and challenge, surprise, disturb, confront, extend, or provoke examination of alternatives drawn from the context of teaching. We define tasks as the problems or activities that, having been developed, evaluated, and refined over time, are posed to teacher education participants. Such participants are expected to engage in these tasks collaboratively, energetically, and intellectually, with an open mind and an orientation to future practice. The tasks might be similar to those used by classroom teachers, e.g., the analysis of a graphing problem, or idiosyncratic to teacher education, e.g., critique of videotaped practice. This edited volume includes chapters based around unifying themes of tasks used in secondary mathematics teacher education. These themes reflect goals for mathematics teacher education and are closely related to various aspects of knowledge required for teaching secondary mathematics. They are not based on the conventional content topics of teacher education, e.g., decimals, grouping practices, but on broad goals such as adaptability, identifying similarities, productive disposition, overcoming barriers, micro-simulations, choosing tools, and study of practice. This approach is innovative and appeals both to prominent authors and to our target audiences. Statistics of Land-grant Colleges and Universities United States. we learn about the questions that capture the attention of teachers the methodologies they use to gather data and the ways in which they make sense of what they find Some of the research findings could be considered preliminary others confirmatory and some may be groundbreaking In all cases they provide fodder for further thinking and discussion about critical aspects of mathematics education [Creativity of an Aha!
