

CAUSES OF DRUG DEPENDENCE

BIOLOGICAL FACTORS

Genetics contribute 40–60% of the risk for substance use disorders. Changes in brain areas like the nucleus accumbens heighten cravings and reduce self-control, particularly in adolescents, whose brains are still developing.

ENVIRONMENTAL FACTORS

Growing up in a substance-abuse-prone environment, peer pressure, childhood trauma, chronic stress, and easy access to drugs all increase the likelihood of dependence.

PSYCHOLOGICAL FACTORS

Mental health disorders like depression and anxiety drive self-medication, while impulsive or sensation-seeking behaviors increase the risk of experimenting with drugs and fostering dependence.
