Analysis and Control of Oilwell Drilling Vibrations Martha Belem Saldivar Márquez,Islam Boussaada,Hugues Mounier,Silviu-Iulian Niculescu,2015-03-09 This book reports the results of exhaustive research work on modeling and control of vertical oil well drilling systems It is focused on the analysis of the system dynamic response and the elimination of the most damaging drill string vibration modes affecting overall perforation performance stick slip torsional vibration and bit bounce axial vibration The text is organized in three parts The first part Modeling presents lumped and distributed parameter models that allow the dynamic behavior of the drill string to be characterized a comprehensive mathematical model taking into account mechanical and electric components of the overall drilling system is also provided The distributed nature of the system is accommodated by considering a system of wave equations subject to nonlinear boundary conditions this model is transformed into a pair of neutral type time delay equations which can overcome the complexity involved in the analysis and simulation of the partial differential equation model The second part Analysis is devoted to the study of the response of the system described by the time delay model important properties useful for analyzing system stability are investigated and frequency and time domain techniques are reviewed Part III Control concerns the design of stabilizing

control laws aimed at eliminating undesirable drilling vibrations diverse control techniques based on infinite dimensional system representations are designed and evaluated The control proposals are shown to be effective in suppressing stick slip and bit bounce so that a considerable improvement of the overall drilling performance can be achieved This self contained book provides operational guidelines to avoid drilling vibrations Furthermore since the modeling and control techniques presented here can be generalized to treat diverse engineering problems it constitutes a useful resource to researchers working on control and its engineering application in oil well drilling
