This is an introduction to the foundations of economic property rights theory EPRT In this volume a first step in the EPRT research program rules concerning economic property rights entrepreneurs agreements and enterprises are discussed Introduced concept of entrepreneurs is an extension of the traditional concept of pairing of residual rights of control and residual rights of returns in the economic theory Its importance in economics is generated from a general impossibility of making a complete contract concerning entrepreneurs for any nontrivial economic transaction The volume offers a theoretical tension of mathematical economics applying recent results of Hopf algebras quasi Hopf algebras representation theory theory of categories and deformation theories in looking for suitable mathematical methodology of economic property rights theories and foundations of general theory of economic agreements The idea is to construct a kind of mathematical application in which any fundamental formal entity and/or operation has an empirical economic interpretation This approach is seen as a way to cope with an extreme complexity of economic phenomena under consideration and requests for precise formulation of models where meaningful answers and solutions of problems are only those which are obtained rigorously The proposed extensions in mathematical economics and property rights theory are to provide rich enough foundations to follow complexity of economic property rights in the exact way and to identify where there is an appropriate method providing a unique solution and also to find problems where in general there is no such methodology *Privatization and Restructuring in Central and Eastern Europe* Gerhard Pohl, 1997-01-01
