Lavond, Joseph E. Steinmetz, 2012-12-06 When conducting scientific research in any field it is not sufficient to simply design thoughtful and informative experiments to explore ideas and hypotheses The experiments must be conducted in such a manner that the data generated effectively address the ideas and hypotheses under study Collecting good data necessitates the use of good methods techniques and instrumentation Behavioral neuroscience is most certainly a field that over the years has required novel inventive and effective methods and tech niques to collect data on a rather difficult subject namely how the brain and nervous system encode behavior Perhaps one of the most interesting things about the field of behav ional neuroscience is that most scientists in this field are engaged in a variety of activities it is not always the same boring routine The rule not the ex ception in this field is that investigators are trained in a variety of techniques and skills This work requires knowledge of skills in such diverse tech niques as surgery animal training basic electronics computer programming statistics and histology as well as having a good theoretical background knowledge of the relevant literature and the creativity and logic necessary to design and execute critical experiments One does not have to be an expert in all of these skills and conversely not all skills require an expert **Neuroanatomical Research Techniques** Richard T.

Robertson, 2013-10-22 Neuroanatomical Research Techniques discusses developments in major neuroanatomical research techniques The book is organized into four parts Part I deals generally with the preparation and study of brain tissue It includes a chapter on the microscope discussing optical magnification limitations of microscopy and optical contrasting methods Other chapters summarize basic techniques for tissue preparation and sectioning present guidelines for a number of standard but essential staining procedures and present sophisticated and contemporary computer techniques that are proving to be invaluable as neuroanatomy evolves from a qualitative to a quantitative discipline Part II deals with techniques often used for the study of normal tissue These include the Golgi method fluorescence histochemistry techniques for staining single neurons and the use of the electron microscope Part III presents techniques for studying intrinsic connections of the nervous system These include techniques for silver impregnation of degenerating fibers autoradiographic technique for studying axonal projections and somatopetal movement of horseradish peroxidase as a tool for studying connections and neuron morphology Part IV discusses the interpretation of results from neuroanatomical research techniques and presents examples of the applications of neuroanatomical methods to major problems in physiological psychology **The**

Hippocampus Robert Isaacson, 2012-12-06 These books are the result of a conviction held by the editors authors and

publisher that the time is appropriate for assembling in one place information about functions of the hippocampus derived from many varied lines of research. Because of the explosion of research into the anatomy, physiology, chemistry, and behavioral aspects of the hippocampus, some means of synthesis of the results from these lines of research was called for. We first thought of a conference. In fact, officials in the National Institute of Mental Health suggested we organize such a conference on the hippocampus, but after a few tentative steps in this direction, interest at the federal level waned, probably due to the decreases in federal support for research in the basic health sciences so keenly felt in recent years. However, the editors also had come to the view that conferences are mainly valuable to the participants. The broad range of students of all ages of brain-behavior relations do not profit from conference proceedings unless the proceedings are subsequently published. Furthermore, conferences dealing with the functional character of organ systems approached from many points of view are most successful after participants have become acquainted with each other's work. Therefore, we believe that a book is the best format for disseminating information and that its publication can be the stimulus for many future conferences.
