A Search For Structure:

A Search for Structure Cyril Stanley Smith, 1983-01 As an old admirer of Cyril Smith I m delighted to learn that a collection of his essays on the arts will be published They are a unique body of work which only he could have produced Meyer Schapiro Science art and history all share common or analogous patterns of hierarchical order that are embedded into the structure of the material world as well This is a central insight of these essays by a generalist who has also spent a lifetime working in his specialty the nature of materials To Cyril Stanley Smith the transformation of metals from one state to another or the contrasts at one level that merge through repetition into uniformity at a higher level carries solid metaphorical implications for the human condition Cyril Stanley Smith s own expansion of outlook to encompass successively technology science history and art is loosely implicit in the chronological ordering of the fourteen essays included in this volume and explicitly developed in one of them that comes as close to an autobiography as I am ever likely to write and traces the evolution of Smith s ideas on science and art Trained as an industrial metallurgist Smith turned to the purely scientific study of the structure of metals and alloys after his experience at Los Alamos during World War II drawn in part by his delight in the intrinsic beauty of these structural manifestations of symmetry and natural design A growing interest in the history of the science and technology of materials led him to consult the artifactual evidence the art objects in museums that either greatly predate written historical records or provide through scientific examination more reliable information than do the surviving documents of their period This direct contact with fine or formal art only reinforced Smith s intuition that the aesthetic impulse is at play over the full range of human activity whether it leads to the making of a bronze sculpture a scientific theory or a social reorganization A variety of investigations of art objects is cited in the text and the author regards the accompanying illustrations to be as important as the text In particular the essays make the case that historically many advances and discoveries regarding metals and ceramics came about through aesthetic curiosity and the desire to improve works of fine and decorative art rather than through scientific investigation or in response to the need for products having practical utility Many techniques and even whole industries Smith writes began with the making and reproduction of art works Other essays deal with the emerging understanding of the remarkable properties of steel the positive uses of corrosion ancient casting and molding techniques and the connection between attempts to reproduce oriental porcelain in Europe and modern geological ideas Still others are more philosophical in approach

Computational Intelligence for Decision Support Zhengxin Chen, 1999-11-24 Intelligent decision support relies on techniques from a variety of disciplines including artificial intelligence and database management systems Most of the existing literature neglects the relationship between these disciplines By integrating AI and DBMS Computational Intelligence for Decision Support produces what other texts don't an explanation of how to use AI and DBMS together to achieve high level decision making Threading relevant disciplines from both science and industry the author approaches computational intelligence as the science developed for decision support The use of computational intelligence for reasoning and DBMS for retrieval brings about a more active role for

computational intelligence in decision support and merges computational intelligence and DBMS The introductory chapter on technical aspects makes the material accessible with or without a decision support background The examples illustrate the large number of applications and an annotated bibliography allows you to easily delve into subjects of greater interest The integrated perspective creates a book that is all at once technical comprehensible and usable Now more than ever it is important for science and business workers to creatively combine their knowledge to generate effective fruitful decision support Computational Intelligence for Decision Support makes this task manageable
