Although much attention has been given to the use of learning styles in the general classroom and in teaching students to use their own in the math classroom, classroom teachers need additional information. The purpose of this book is to address the improvement of mathematics instruction through the use of learning style-based instruction. The authors discuss the effective use of accommodations in teaching certain concepts at all grade levels, offer numerous ways to describe spatial reasoning skills to students and provide activities which accommodate students of learning styles. Learning style-based instruction is a practical strategy which teachers can and should use. Teaching will be more effective, there will be less frustration and the overall mathematics curriculum will be greatly enhanced.
