Design, Analysis, and Applications Jan Korvink, Oliver Paul, 2010-05-28 MEMS are rapidly moving from the research laboratory to the marketplace. Many market studies indicate not only a tremendous market potential of MEMS devices year by year we see the actual market grow as the technology matures. In fact these days many large silicon foundries have a MEMS group exploring this promising technology including such giants as INTEL and Motorola. Yet MEMS are fundamentally different from microelectronics. This means that companies with an established track record in these branches need to adapt their skills whereas companies that want to enter the miniaturization market need to establish an entirely new set of capabilities. The same can be said of engineers with classical training who will also need to be educated toward their future professional activity in the MEMS field. Here are some questions that a company or technologist may ask: I have an existing product with miniaturization market potential. Which technology should I adopt? What are the manufacturing options available for miniaturization? What are the qualitative differences? How do we maintain a market lead for products based on MEMS? Is there CAD support? Can we outsource manufacturing? Which skills in our current capability need only adaptation? What skills need to be added? Professors Jan Korvink and Oliver Paul have set out to answer these questions in a form that addresses the needs of companies, commercial practitioners and technologists. Communicating Science: A Practical Guide For Engineers And Physical Scientists Edith S Boxman, Reuven (Raymond) L Boxman, 2016-12-28 The book under review is indeed a guide and a practical one too but it is not only for engineers and physical scientists it is useful to all those who communicate technical information or need to and want to do the job well. The book achieves the objectives every PhD student may not want to read the book but should and will not regret it. European Science Editing. Read this book before you write your thesis or journal paper. Communicating Science is a textbook and reference on scientific writing oriented primarily at researchers in the physical sciences and engineering. It is written from the perspective of an experienced researcher. It draws on the authors' experience of teaching and working with both native English speakers and English as a Second Language (ESL) writers. For the range of topics covered this book is relatively short and tersely written in order to appeal to busy researchers. Graduate students and early career researchers will be guided through the researcher's basic communication tasks: writing theses, journal papers and internal reports, presenting lectures and posters and preparing research proposals. Extensive best practice examples and analyses of common problems are presented. Advanced researchers who aim to commercialize their research results will be introduced to business plans and patents so that they can communicate optimally with patent attorneys and business analysts. Likewise advanced researchers will be assisted in conveying the results of their research to the industrial and business community, governmental circles and the general public in the chapter on popular media. Researchers at all levels will find the chapter on CVs and job hunting helpful. The Writing Well chapter will assist researchers to improve their English usage in scientific writing. This chapter is oriented both at native English speakers who have an intuitive command of English but often lack formal instruction on grammar and structure and

non native English writers who often have had formal instruction but lack intuitive grasp of what sounds good Mentors will find the book a useful tool for systematically guiding their students in their early writing efforts If your students read this book first you will save time Communicating Science may serve as a textbook for graduate level courses in scientific writing
