International Symposium on History of Machines and MechanismsProceedings HMM 2000 Marco Ceccarelli,2013-11-11 The International Symposium on History of Machines and Mechanisms is a new initiative to promote explicitly researches and publications in the field of the History of TMM Theory of Machines and Mechanisms It was held at the University of Cassino Italy from 11 to 13 May 2000 The Symposium was devoted mainly to the technical aspects of historical developments and therefore it has been addressed mainly to the IFToMM Community In fact most the authors of the contributed papers are experts in TMM and related topics This has been indeed a challenge convincing technical experts to go further in depth into the background of their topics of expertise We have received a very positive response as can be seen by the fact that these Proceedings contain contributions by authors from all around the world We received about 50 papers and after review about 40 papers were accepted for both presentation and publishing in the Proceedings This means also that the History of TMM is of interest everywhere and indeed an in depth knowledge of the past can be of great help in working on the present and in shaping the future with new ideas I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work historical or not These papers cover the wide field of the History of Mechanical Engineering and particularly the History of TMM **RAMSETE** Salvatore Nicosia,Bruno Siciliano,Antonio Bicchi,Paolo Valigi,2003-07-01 Robotics applications initially developed for industrial and manufacturing contexts are now strongly present in several elds Besides well known space and high technology applications robotics for every day life and medical s vices is becoming more and more popular As an example robotic manipu tors are particularly

useful in surgery and radiation treatments they could be employed for civil demining for helping disabled people and ultimately for domestic tasks entertainment and education Such a kind of robotic applications require the integration of many different skills Autonomous vehicles and mobile robots in general must be integrated with articulated manipulators Many robotic technologies sensors actuators and computing systems must be properly used with specific technologies localisation planning and control technologies The task of designing robots for these applications is a hard challenge a specific competence in each area is demanded in the effort of a truly integrated multidisciplinary design

Sensor Based Intelligent Robots Gregory D. Hager, Henrik I. Christensen, Horst Bunke, Rolf Klein, 2003-08-06 Robotics is a highly interdisciplinary research topic that requires integration of methods for mechanics control engineering signal processing planning graphics human computer interaction real time systems applied mathematics and software engineering to enable construction of fully operational systems The diversity of topics needed to design implement and deploy such systems implies that it is almost impossible for individual teams to provide the needed critical mass for such endeavors To facilitate interaction and progress on sensor based intelligent robotics interdisciplinary workshops are necessary through which depth discussion can be used for cross dissemination between different disciplines The Dagstuhl foundation has organized a number of workshops on Modeling and Integration of Sensor Based Intelligent Robot Systems The Dagstuhl seminars take place over a full week in a beautiful setting in the Saarland in Germany The setting provides an ideal environment for in depth presentations and rich interaction between the participants This volume contains papers presented during the fourth workshop held tober 15 20 2000 All papers were submitted by workshop attendees and were reviewed by at least one reviewer We wish to thank all of the reviewers for their invaluable help in making this a high quality selection of papers We gratefully acknowledge the support of the Schloss Dagstuhl Foundation and the staff at Springer Verlag Without their support the production of this volume would not have been possible

A Stable and Transparent Framework for Adaptive Shared Control of Robots Ribin Balachandran, 2023-12-28

Robotic research and developments in computing technologies including artificial intelligence have led to significant improvements in autonomous capabilities of robots. Yet human supervision is advisable and in many cases necessary when robots interact with real world outside lab environments. This is due to the fact that complete autonomy in robots has not yet been achieved. When robots encounter challenges beyond their capabilities, a viable solution is to include human operators in the loop who can support robots through teleoperation, taking complete control or shared control. This monograph focuses on a special form of shared control, namely mixed initiative, where the final command to the robot is a weighted sum of the commands from the operator and the autonomous controller. The weights, fixed or adaptive, called authority allocation (AA) factors, decide who has more control authority over the robot. Several research groups use different methods to adapt the AA factors online, and the benefits of adaptive mixed initiative shared control have been well established in terms of task completion success and operator usability. However, stability of the overall shared control framework with communication time delays between the operator and the robot is a field that has not been examined extensively. This monograph presents methods to improve performance and stability in shared control so that the possibilities of its applications can be widened. Firstly, methods to improve the haptic feedback performance of teleoperation are developed. Secondly, methods to stabilize adaptive shared control systems while still ensuring high teleoperation performance are proposed. The methods are validated on multiple robotic systems and they were applied in several projects both in space and terrestrial domains. With the aforementioned contributions, this monograph provides an overarching framework to improve synergy between humans and robots. The flexibility of the framework allows integration of existent teleoperation and shared control approaches, which further promotes synergy within the robotics community.
