

The science of circles

What's really going on when parts of your scene aren't quite in focus

NEARER TO YOU
Circles of confusion

Point of focus

FURTHER FROM YOU
Circles of confusion

The further a point on the subject is from the point of focus, the bigger the circle.
When the circle is small enough, it will be indistinguishable from a point in the picture.
This creates the 'acceptably sharp' range we call depth of field.
