**Cities and Complexity** Karen S. Christensen, 1999 Planners hate uncertainty The objective of their work is to devise a course of action that will reduce uncertainty on a public scale However complicated intergovernmental systems often make their work complex and difficult The planning profession is founded in quandries How can we know the future What is the public interest How can we know which values are right What is the relationship between means and ends This book addresses the mismatch between the assumptions of planning and the actual operations of the intergovernmental system Basing her work not only on empirical research but on years of personal experience in complex governmental agencies specifically HUD Karen Stromme Christensen presents a new theory of the underlying structure and dynamics of the U S intergovernmental system It is designed to help planners and policy makers clarify the obstacles to effective action on behalf of the public good Moreover it suggests ways to preserve and restore the strengths of federalism and to adjust aspects that have become counterproductive

**The Quality of Territorial Policies in Europe's Periphery** Mauro Tebaldi,Marco Calaresu,2021-05-02 This book focuses on territorial policies as instruments for local development in Europe s periphery Using a multiple case research design in three typical case studies in the context of the Mediterranean island of Sardinia Italy we empirically test the hypothesis that the institutionalisation of the governance system is an independent variable that is capable of influencing the quality of public policy intended as a dependent variable According to this hypothesis the two above mentioned variables tend to change according to a linear and direct correlation upward variation of the degree of institutionalisation of the governance system tends to correspond to upward variation in the quality of the policy and vice versa In our conclusions we discuss the descriptive and prescriptive implications of the empirical findings of the research for the local development of peripheral areas Regarding the descriptive implications we explain how territorial policy making can be articulated based on the degree of institutionalisation of the governance system and the quality of the territorial policies Regarding the prescriptive implications we identify the best practices for territorial governance in order to improve the chances of local development in Europe s periphery

*The Power to Collaborate* Nadav Haran,2010

Spatial Planning and Urban Development Pier Carlo Palermo,Davide Ponzini,2010-06-25 Urban planning is a complex field of knowledge and practice Through the decades theoretical debate has formed an eclectic set of possible perspectives without finding in our opinion a coherent paradigmatic framework which can adequately guide the interpretation and action in urban planning The hypothesis of this book is that the attempts of founding an autonomous planning theory are inadequate if they do not explore two interconnected fields architecture and public policies The book critically reviews a selected set of current practices and theoretical founding works of modern and contemporary urban planning by highlighting the continuous search for the epistemic legitimization of a large variety of experiences The distinctive contribution of this book is a documented critique to the eclecticism and abstraction of the main international trends in current planning theory The dialogic relationship with the traditions of architecture and public policy is proposed here in order to critically review planning theory and practice The outcome is the proposal of a paradigmatic framework that in the authors opinion can adequately guide reflections and actions A pragmatic and interpretative heritage and the project orientated approach are the basis of this new spatial planning paradigm
