Cities And The Environment New Approaches For Ecosocieties:

Green Cities: Urban Environmental Solutions , Environment and the City Joe Ravetz, Clive George, Joe Howe, 2004-07-15 For the first time at the beginning of the twenty first century urban dwellers outnumber rural residents and this trend is set to continue Consequently one of the most pressing issues of our time is how to square the social and economic development of cities with their environmental limits and those of the wider environment The theme of the environment and city is topical at every level from the politics of global trade to local community networks Environment and the City looks at the evolution of cities in the developed and the developing world and the implications for resource consumption and environmental impacts It takes a cross cutting approach with new thinking on multiple geographies the configuration of networks exclusion consumption risk and ecological footprint Urban environmental themes and their related social economic and political agendas are outlined In turn the environmental impacts and environmental agendas relating to key sectors of the urban economy are discussed The global context to such issues is then explored before the practical tools and methods of urban environmental management are investigated The theme of the sustainable city emerges from this not so much as a standard menu but as a learning process between all sections of society This book a valuable resource provides a concise accessible route map for all students interested in the environmental issues emanating from our urban society Written to aid student understanding the easily navigable text features boxed practical examples discussion points signposts to reading and websites and a glossary

Facing Global Environmental Change Hans Günter Brauch, Navnita Chadha Behera, Patricia Kamari-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czeslaw Mesjasz, Heinz Krummenacher, 2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth

assessment Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world

The Processes and Theories of the Smart City Melissa Sessa, 2021-10-26 This book describes the phenomenon of the smart city in all its facets through sociological lenses What is a smart city What social challenges is it addressing What are its limits and what are its potentialities The concept of the smart city is still somewhat unclear although the smart city project is currently at the forefront of society Through a precise analysis of the concept of smart the book provides a holistic definition of what constitutes a smart city It will guide readers who want to analyse and describe the smart city not only in the sociological field but also in the technical scientific field and for those who want to explore its limits its potentialities and its future developments

Urban Areas and Global Climate Change William Holt, 2012-10-12 Examining urban environmental issues at the macro municipal level down to the micro community and individual level this volume features cities and metropolitan regions across the global north and south with case studies from the United States Canada Eastern and Western Europe to India Central America South America and Africa

Earth System Science in the Anthropocene Eckart Ehlers, Thomas Krafft, 2006-03-14 Earth System Science in the Anthropocene aims to provide an in depth perspective and update on special topics in Global Environmental Change in relation to Human Security It gives an overview on the new Joint Projects of the four International Global Change Programmes and on research efforts in Germany It is also an up to date report on emerging necessities in Global Environmental Change research as well as suggestions for its future development

Sustainable Communities: A Framework for Planning Raymond Charles Rauscher, Salim Momtaz, 2013-10-13 This book is in part a response to the attempts of governments to address increasing concerns over such environmental issues as the impact of climate change carbon emissions pressures from overpopulation of cities coal seam gas extraction and depleting natural resources The authors have developed a Sustainable Communities Framework SCF which incorporates social cultural environmental and economic sustainability principles in the process of urban planning The authors propose a five step SCF built on an application of sustainability tables The book examines a wide range of urban planning practices utilizing sustainability criteria outlining both qualitative and quantitative tools Separate chapters discuss application of the SCF to both the natural environment and the built environment This framework is applied to a case study of the outer Sydney growth area of Wyong Shire Central Coast NSW Australia

Addressing the question of how best to measure the environment the authors present a table for selecting indicators of sustainability and outline sustainability scorecards which use color coded ratings of green red and amber to measure indicators of sustainability The authors show how aggregating these ratings allows the framework to be scaled up for application to larger areas Finally the authors show how scorecards can be incorporated in sustainability reports with actions and monitoring components The authors also examine urban planning education including land use planning natural resource planning and sustainable urban planning focusing on the extent to which schools incorporate principles of sustainability The authors offer their critique on the movement of planning practices towards a more coordinated and holistic framework in incorporating sustainability principles Sustainable Communities A Framework for Planning concludes by drawing a future scenario on the application of the SCF to incorporate principles of sustainability into urban planning The authors propose future options for SCF applications including adopting a systems program environmental performance monitoring and showing how the framework will accommodate the social cultural and economic components of sustainability in addition to the environmental ones as examined in the case study

Urban Eco-Communities in Australia Liam Cooper, Hans A. Baer, 2018-06-28 This book offers one of the first detailed anthropological studies of emergent ecotopianism in urban contexts Engaging directly with debates on urbanisation sustainability and utopia it presents two detailed ethnographic case studies of inner urban Australian eco communities in Adelaide and Melbourne These novel responses to the ecological crisis real social laboratories that attempt to manifest a vision of the eco city in microcosm offer substantial new insights into the concept and creation of sustainable urban communities their attempts to cultivate ways of living that are socially and ecologically nourishing and their often fraught relationship to the capitalist city beyond These studies also suggest the opportunities and limitations of moving beyond demonstration projects towards wider urban transformation as well as exposing the problems of accessibility and affordability that thwart further urban eco interventions and the ways that existing projects can exacerbate issues of gentrification and privilege in a socially polarised city Amidst the challenges of the capitalist city climate change and ecological crisis this book offers vital lessons on the potential of urban sustainability in future cities
