City and Country Alexander R. Thomas, Gregory M. Fulkerson, 2021-06-17 City and Country The Historical Evolution of Urban Rural Systems begins with a simple assumption every human requires on average two thousand calories per day to stay alive Tracing the ramifications of this insight leads to the caloric well the caloric demand at one point in the environment As population increases the depth of the caloric well reflects this increased demand and requires a population to go further afield for resources a condition called urban dependency City and Country traces the structural ramifications of these dynamics as the population increased from the Paleolithic to today We can understand urban dependency as the product of the caloric demands a population puts on a given environment and when those demands outstrip the carry capacity of the environment a caloric well develops that forces a community to look beyond its immediate area for resources As the well deepens the horizon from which resources are gathered is pushed further afield often resulting in conflict with neighboring groups Prior to settled villages increases in population resulted in cultural technological innovations that allowed for greater use of existing resources the broad spectrum revolution circa 20 thousand years ago the birth of agricultural villages 11 thousand years ago and hierarchically organized systems of multiple settlements working together to produce enough food during the Ubaid period in Mesopotamia seven thousand years ago the first urban rural systems As cities developed increasing population resulted in an ever deepening morass of urban dependency that required expansion of urban rural systems These urban rural dynamics today serve as an underlying logic upon which modern capitalism is built The culmination of two decades of research into the nature of urban rural dynamics City and Country argues that at the heart of the logic of capitalism is an even deeper logic urbanization is based on urban dependency

The Oxford Handbook of Early Modern European History, 1350-1750 Hamish M. Scott, 2015 This Handbook re examines the concept of early modern history in a European and global context The term early modern has been familiar especially in Anglophone scholarship for four decades and is securely established in teaching research and scholarly publishing More recently however the unity implied in the notion has fragmented while the usefulness and even the validity of the term and the historical periodisation which it incorporates have been questioned The Oxford Handbook of Early Modern European History 1350 1750 provides an account of the development of the subject during the past half century but primarily offers an integrated and comprehensive survey of present knowledge together with some suggestions as to how the field is developing It aims both to interrogate the notion of early modernity itself and to survey early modern Europe as an established field of study The overriding aim will be to establish that early modern is not simply a chronological label but possesses a substantive integrity Volume I examines Peoples and Place assessing structural factors such as climate printing and the revolution in information social and economic developments and religion including chapters on Orthodoxy Judaism and Islam
