Grossman, Catherine Ruth Schenk, 2016 The financial crisis of 2008 aroused widespread interest in banking and financial history Contributions to this volume analyse banking and financial history in a long term comparative perspective Lessons drawn from these analyses may well help future generations of policy makers avoid a repeat of the financial turbulence that erupted in 2008

**London's 'Big Bang' Moment and its Architectural Conversations** Stephen Rosser, 2025-06-30 This book explores the topic of architecture as a component of public discourse focussing on the reception of four high profile developments in the City of London the UK capital's financial district dating from the final years of the twentieth century During this time the City's mode of operation culture and built environment were all transformed as a result of the market deregulation process labelled Big Bang It was also a period which saw the subject of architecture attracting public and media attention becoming a prominent feature of national conversation The book examines the extensive and often contentious discourse generated by the four case study projects It looks at how these projects were viewed and interpreted retrospectively when they had become part of the City's long and rich history Topics explored include building and urban form on the eve of the millennium the place of new development in a setting of unique historic importance the iconic building and celebrity architect and the role of then Prince Charles as an architectural critic Also referenced are many of the broader issues of the day including the Thatcher government policies and the preoccupations concerning London's infrastructure public realm inner city areas and inequalities Furthermore ranging across the discourse is the theme of the relationship between buildings and global finance foreshadowing later controversies concerning London's post millennial towers and their impact on the capital's skyline The book will be of interest to researchers and students of late twentieth century British architecture and urban development London's history and UK public discourse in the 1980s a decade of profound political economic and social change

**The British Government and the City of London in the Twentieth Century** Ranald Michie, Philip Williamson, 2004-10-21 The relationship between the British government and the City of London has become central to debates on modern British economic political and social life For some the City's financial and commercial interests have exercised a dominant influence over government economic policy creating a preoccupation with international markets and the strength of sterling which impaired domestic industrial and social well being Others have argued that government seriously constricted financial markets jeopardising Britain's most successful economic sector This collection of essays was the first book to address these issues over the entire twentieth century It brings together leading financial and political historians to assess the government City relationship from several directions and by examination of key episodes As such it will be indispensable not just for the study of modern British politics and finance but also for assessment of the worldwide problem of tensions between national governments and international financial centres

**Capitals of Capital** Youssef Cassis, 2010 useful reading for anyone

interested in the antecedents of today's vibrant international financial markets      *Modernity Britain* David Kynaston, 2013-06-20 The late 1950s was an action-packed often dramatic time in which the contours of modern Britain began to take shape. These were the never-had-it-so-good years when the Carry On film series and the TV soap Emergency Ward 10 got going and films like *Room at the Top* and plays like *A Taste of Honey* brought the working class to the centre of the national frame when the urban skyline began irresistibly to go high-rise when CND galvanised the progressive middle class when youth emerged as a cultural force when the Notting Hill riots made race and immigration an inescapable reality and when meritocracy became the buzz word of the day. The consequences of this modernity zeitgeist David Kynaston argues still affect us today      *The City of London and Social Democracy* Aled Rhys Davies, 2017 The City of London and Social Democracy evaluates the changing relationship between the United Kingdom financial sector the City of London and the post-war social democratic State. The key argument made in Aled Davies's study is that changes to the British financial system during the 1960s and 1970s undermined a number of the key components of social democratic economic policy practised by the post-war British State. The institutionalization of investment in pension and insurance funds the fragmentation of an oligopolistic domestic banking system the emergence of an unregulated international capital market centred on London the breakdown of the Bretton Woods international monetary system and the popularization of a City-centric anti-industrial conception of Britain's economic identity all served to disrupt and undermine the social democratic economic strategy which had attempted to develop and maintain Britain's international competitiveness as an industrial economy since the Second World War. These findings assert the need to place the Thatcher government's subsequent economic policy revolution in which a liberal market approach accelerated deindustrialization and saw the rapid expansion of the nation's international financial service industry within a broader material and institutional context previously underappreciated by historians.

*Forex Forever* Ranald C. Michie, 2024-02-28 The world's largest market is that for foreign exchange with a turnover running into trillions per day. The mystery is why this market is dominated by trading in London when the US dollar is the main currency in use. What role is played by this market? To many it is a speculator's paradise exposed to manipulation and contributing to currency volatility. For others it plays a central role in the operation of the global banking system and a mechanism for maintaining currency stability. In *Forex Forever* Ranald C. Michie seeks to provide answers to these and other questions by examining how the foreign exchange market has developed in the City of London over the past 150 years and uncovers its secret existence in London before the First World War. Michie explores how the City of London became the centre of the global foreign exchange market before 1914 through the international banking network trading on the floor of the Stock Exchange and the communications revolution that began with the telegraph. He investigates how that position was sufficient to make London the centre of a new foreign exchange market that emerged between the wars survived the era of fixed exchange rates after the Second World War and then flourished from 1970 onwards. This in-depth study helps to explain

how and why the global monetary system has functioned since the middle of the nineteenth century      **Family Britain, 1951-1957** David Kynaston, 2010-05-03 Family Britain continues David Kynaston's groundbreaking series Tales of a New Jerusalem telling as never before the story of Britain from VE Day in 1945 to the election of Margaret Thatcher in 1979      *It Doesn't Have to be Like this* Margaret Legum, 2003 This title is aimed at those of us who feel instinctively that there is something badly wrong with our global system of trade and finance where money for its own sake is valued over jobs and people's lives but don't know how to start suggesting alternatives      **Centres and Peripheries in Banking** Even Lange, Ulf Olsson, Iain L. Fraser, 2016-12-05 This volume presents a broad investigation into the relationship between the centre and the periphery in banking Focusing on the historical development of financial markets from their emergence in the early modern period to today's global financial and capital markets the chapters investigate how local national and international relationships have affected and helped shape the banking industry over three hundred years This wide ranging discussion in time and place is provided by a group of international experts encompassing bankers economists economic historians and historians and will be of interest to all those with a scholarly or professional interest in the development of financial institutions      *WG's Birthday Party* David Kynaston, 2011-04-18 \_\_\_\_\_ A fascinating examination of cricket in the nineteenth century by the most entertaining historian alive Spectator Few historians have the power to make you feel you actually inhabit the times they are writing about Kynaston does Sunday Times Books of the Decade On a hot morning in July 1898 the sporting world gathered at Lord's to celebrate the fiftieth birthday of WG Grace the greatest cricketer the game has ever seen Grace was cheered onto the field by a packed crowd as he captained the Gentlemen the privileged old guard of the Establishment Their opponents in this annual match were the Players cricketers for whom the sport was a precarious livelihood rather than a summer pastime This three day encounter represented the climax of cricket's Golden Age and the unstoppable arrival of the professional game that would dominate the twentieth century In WG's Birthday Party David Kynaston tells the story of one of the most thrilling matches in cricketing history as well as the colourful and sometimes tragically moving lives of the members of both teams Using the Gentlemen vs Players contest as a lens through which to examine the hierarchy and tensions endemic in cricket at the beginning of the modern era he presents a lively moving richly detailed and massively entertaining portrait of late Victorian society It is social history at its most compelling from the most entertaining historian alive \_\_\_\_\_ An absolute gem of a book Guardian Kynaston writes brilliantly and readably Independent on Sunday      **Governing Financial Globalization** Andrew Baker, David Hudson, Richard Woodward, 2005-02 This volume provides a wide ranging discussion of both the potential and the problems arising from the application of multi level governance literature to the monetary and financial domain      **Economists and Societies** Marion Fourcade, 2009-03-09 Economists and Societies is the first book to systematically compare the profession of economics in the United States Britain and France and to explain why economics far from being a uniform science differs in important ways

among these three countries Drawing on in depth interviews with economists institutional analysis and a wealth of scholarly evidence Marion Fourcade traces the history of economics in each country from the late nineteenth century to the present demonstrating how each political cultural and institutional context gave rise to a distinct professional and disciplinary configuration She argues that because the substance of political life varied from country to country people s experience and understanding of the economy and their political and intellectual battles over it crystallized in different ways through scientific and mercantile professionalism in the United States public minded elitism in Britain and statist divisions in France Fourcade moves past old debates about the relationship between culture and institutions in the production of expert knowledge to show that scientific and practical claims over the economy in these three societies arose from different elites with different intellectual orientations institutional entanglements and social purposes Much more than a history of the economics profession Economists and Societies is a revealing exploration of American French and British society and culture as seen through the lens of their respective economic institutions and the distinctive character of their economic experts

**The City** Tony Golding,2003 The landscape of our financial system is dominated by institutional investment The funds move markets when they act and corporate empires can rise fall or change hands on the tide of institutional opinion and the flow of equity Today in many ways these institutions are the City such is their influence over the whole financial process They are at the heart of the expectation machine the Capital of capital These all powerful financial players cast a long shadow over the worlds of investment corporate and venture finance and yet City outsiders from private investors to company directors many of whose expectations and fortunes are tied to the flow of equity know little about them They may glimpse parts of the process through the frequently distorted lens of the press they may find their activities and fortunes affected by the movements of institutional players but rarely do they understand the subtle and complex relationships that drive behaviour of the City It is remarkable in view of the power wielded by the big investment institutions how little has been written about them especially from an analytical rather than anecdotal standpoint The financial world and the business world it drives need a better understanding of the City and the behaviour of equity the visible part of what the City does In *The City Inside the Great Expectations Machine* Investment Analyst Tony Golding takes you inside the equity market and explains its structure dynamics and behaviour An easy to read comprehensive analysis of the big investment institutions who dominate the stock market with key insights into their impact on the City industry and the private investor This book will explain how the institutions achieved their ascendancy acquire their funds invest those funds and significantly influence other City activities and the corporate world in the process The book will trace the flow of funds through the City and offer valuable insights into how fund managers behave what drives their performance the pressures they are under and the effects of their actions on the investment and corporate worlds The behaviour of the investment institutions pension funds insurance companies unit trusts investment trusts touches in one way or another the great majority of those living in the UK To an extent that few

outside the City appreciate they dominate the London stock market both in terms of ownership and activity This text examines the way these institutions work how fund managers invest and the implications of their investment behaviour Institutional investors own 75 per cent of the shares quoted in the UK In no other major economy including the USA where the institutional control is a much more modest 55 per cent do the investment institutions exert such a grip on the corporate sector It is not uncommon for large and medium sized British companies to have 80 or 90 per cent institutional ownership Share prices are determined by the fund managers working in a small number of large institutions The nostalgic idea that price setting in the stock market is the result of a multitude of individual decisions is this text argues a dangerous illusion The book provides information about the investment institutions around which the stock market revolves arguing that their perceptions and their actions determine the level of share prices and much else besides such as the success or failure of a takeover bid It asks what motivates fund managers and how do they make their decisions How do companies communicate with their institutional shareholders especially in regard to the task of managing expectations What companies do fund managers like or dislike and why And to what extent do they rely on the investment analysts employed by the investment banks for information and advice

need to learn from historical experience and temper this with more traditional forms of trust or become an ever more distrustful society with potentially very destabilising consequences
