Key words Information networks IP networks Integrated Services Differentiated Services Multiprotocol Label Switching UMTS *VLSI Design for Video Coding* Youn-Long Steve Lin, Chao-Yang Kao, Hung-Chih Kuo, Jian-Wen Chen, 2009-12-29 High definition video requires substantial compression in order to be transmitted or stored economically Advances in video

coding standards from MPEG 1 MPEG 2 MPEG 4 to H 264 AVC have provided ever increasing coding efficiency at the expense of great computational complexity which can only be delivered through massively parallel processing This book will present VLSI architectural design and chip implementation for high definition H 264 AVC video encoding using a state of the art video application with complete VLSI prototype via FPGA ASIC It will serve as an invaluable reference for anyone interested in VLSI design and high level EDA synthesis for video Analog Layout Synthesis Helmut E. Graeb, 2010-09-28 Integrated circuits are fundamental electronic components in biomedical automotive and many other technical systems A small yet crucial part of a chip consists of analog circuitry This part is still in large part designed by hand and therefore represents not only a bottleneck in the design flow but also a permanent source of design errors responsible for re designs costly in terms of wasted test chips and in terms of lost time to market Layout design is the step of the analog design flow with the least support by commercially available computer aided design tools This book provides a survey of promising new approaches to automated analog layout design which have been described recently and are rapidly being adopted in industry

H-infinity Control for Nonlinear Descriptor Systems He-Sheng Wang, Chee-Fai Yung, Fan-Ren Chang, 2006-01-18 The authors present a study of the H infinity control problem and related topics for descriptor systems described by a set of nonlinear differential algebraic equations They derive necessary and sufficient conditions for the existence of a controller solving the standard nonlinear H infinity control problem considering both state and output feedback One such condition for the output feedback control problem to be solvable is obtained in terms of Hamilton Jacobi inequalities and a weak coupling condition a parameterization of output feedback controllers solving the problem is also provided All of these results are then specialized to the linear case The derivation of state space formulae for all controllers solving the standard H infinity control problem for descriptor systems is proposed Among other important topics covered are balanced realization reduced order controller design and mixed H2 H infinity control H infinity Control for Nonlinear Descriptor Systems provides a comprehensive introduction and easy access to advanced topics Proceedings of the ... VLSI Physical Design Automation is a core reference text for graduate students and CAD professionals It provides a comprehensive treatment of the principles and algorithms of VLSI physical design Algorithms for VLSI Physical Design Automation presents the concepts and algorithms in an intuitive manner Each chapter contains 3 4 algorithms that are discussed in detail Additional algorithms are presented in a somewhat shorter format References to advanced algorithms are presented at the end of each chapter Algorithms for VLSI Physical Design Automation covers all aspects of physical design The first three chapters provide the background material while the subsequent chapters focus on each phase of the physical

design cycle In addition newer topics like physical design automation of FPGAs and MCMs have been included The author provides an extensive bibliography which is useful for finding advanced material on a topic Algorithms for VLSI Physical Design Automation is an invaluable reference for professionals in layout design automation and physical design **The First Outstanding 50 Years of “Università Politecnica delle Marche”** Sauro Longhi, Andrea Monteriù, Alessandro Freddi, Emanuele Frontoni, Michele Germani, Gian Marco Revel, 2019-12-16 The book describes the significant multidisciplinary research findings at the Università Politecnica delle Marche and the expected future advances It addresses some of the most dramatic challenges posed by today's fast growing global society and the changes it has caused It also discusses solutions to improve the wellbeing of human beings The book covers the main research achievements in the different disciplines of the physical sciences and engineering as well as several research lines developed at the university's Faculty of Engineering in the fields of electronic and information engineering telecommunications biomedical engineering mechanical engineering manufacturing technologies energy advanced materials chemistry physics of matter mathematical sciences geotechnical engineering circular economy urban planning construction engineering infrastructures and environment protection technologies and digitization of the built environment and cultural heritage It highlights the international relevance and multidisciplinary nature of research at the university as well as the planned research lines for the next years The Arts of VLSI Circuit Design - Symmetry Approaches toward Zero PVT Sensitivity Hongjiang Song, 2018-02-26

This is one of a book in a VLSI circuit design book series Dr Hongjiang Song published under the VLSI signal processing circuit techniques This text covers various state of the arts circuit design techniques based on VLSI symmetry principles These methods offer inherently low PVT sensitivity for VLSI analog circuit design with superior scalability and performance

Research Perspectives on Dynamic Translinear and Log-Domain Circuits Wouter A. Serdijn, Jan Mulder, 2013-06-29 The area of analog integrated circuits is facing some serious challenges due to the ongoing trends towards low supply voltages low power consumption and high frequency operation The situation is becoming even more complicated by the fact that many transfer functions have to be tunable or controllable A promising approach to facing these challenges is given by the class of dynamic translinear circuits which are as a consequence receiving increasing interest Several different names are used in literature log domain exponential state space current mode companding instantaneous companding tanh domain sinh domain polynomial state space square root domain and translinear filters In fact all these groups are overlapping subclasses of the overall class of dynamic translinear circuits Research Perspectives on Dynamic Translinear and Log Domain Circuits is a compilation of research findings in this growing field It comprises ten contributions coming from recognized dynamic translinear researchers in Europe and North America Research Perspectives on Dynamic Translinear and Log Domain Circuits is an edited volume of original research
