Cardiovascular Beta Adrenergic Responses Albert A. Kattus, Gordon Ross, Victor Hall, 2023-11-15 This volume Cardiovascular Beta Adrenergic Responses compiles the proceedings of a pivotal conference held in February 1968 sponsored by the UCLA School of Medicine and University of California Extension with support from Ayerst Laboratories The conference brought together leading researchers to present and discuss the groundbreaking developments in the understanding and clinical application of beta adrenergic stimulation and blockade particularly at a time when the potent beta blocker propranolol was about to be introduced for widespread clinical use The symposium addressed both the basic scientific aspects of beta adrenergic function and its clinical implications On the first day experts explored the mechanisms of beta adrenergic stimulation and blockade in the heart and peripheral vessels featuring important discussions on the electrophysiological effects of catecholamines and preliminary findings on their role in cardiac function The second day focused on clinical outcomes highlighting the effectiveness of beta blockers in treating arrhythmias angina pectoris and hypertrophic cardiomyopathy Propranolol's therapeutic potential especially its rapid impact on ischemic symptoms was underscored throughout the proceedings This volume not only reflects on the progress made in cardiovascular pharmacology but also honors the pioneering work of Dr Raymond P Ahlquist whose alpha beta hypothesis laid the foundation for these transformative advances This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1970

The Evaluation of Beta Blocker and Calcium

Antagonist Drugs J. Morganroth, E. Neil Moore, 2012-12-06 With the beginning of the 1980's it was becoming increasingly evident that the lack of approval of new cardiovascular agents for use by clinicians in the United States for the treatment of cardiovascular disorders was becoming a problem Patients requiring medical therapy for hypertension angina pectoris arrhythmias congestive heart failure and vasospastic disorders of the coronary arteries could receive in the United States only a small number of the drugs available to physicians in the rest of the world In fact as the 1980's began there was only one available beta blocking agent released by The Food and Drug Administration and even as of this writing no oral calcium antagonist agent This lag in part has been due to the confusion of proper and expeditious methods to define safety and efficacy of such agents so that the United States regulatory agency Food and Drug Administration could approve the use of such agents by clinicians The vast number of new beta blocker and calcium antagonist agents being developed as well as the long term use abroad of many new drugs has raised important questions as to how relative safety and efficacy of such agents can be determined to facilitate availability in the United States

this volume It would appear that the diagnosis of cardiomyopathy is now made more often than it was 10 years ago The reason for this is probably not that the incidence of the disease has increased but that it is better recognized Where conventional clinical investigation may have failed to define the underlying disease process in a given patient improved or more widely used diagnostic tools such as selective coronary arteriography and endomyocardial biopsies have contributed greatly to proper diagnosis Furthermore uniformity of terminology has also taken place during the last few years permitting more accurate categorization of patients suffering from this entity The difficult subject of terminology is discussed in a special section **Coronary Artery Medicine and Surgery** John C.
