Cisplatin Current Status And New Developments:

Cisplatin Archie W. Prestayko, 2013-10-22 Cisplatin Current Status and New Developments is a collection of papers presented at a symposium sponsored by the University of Alabama in Birmingham Comprehensive Cancer Center and the Bristol Laboratories in Syracuse New York and held on September 27-28 1979 in Atlanta Georgia The symposium provided a forum for assessing developments with regards to cisplatin as an anticancer drug with emphasis on its clinical application in a wide variety of adult and pediatric malignancies as well as the mechanism by which the drug appears to cause tumor cell death Comprised of 39 chapters this book begins with a preclinical overview of cisplatin focusing on its mechanism of action pharmacology antitumor activity analogs and toxicity The discussion then turns to the effects of cisplatin on DNA and the possible relationships to cytotoxicity and mutagenicity in mammalian cells lethal activity of platinum compounds in combination with pyrimidine derivatives and ultrastructural effects of cisplatin Subsequent chapters focus on the rationale of combination chemotherapy toxic side effects of platinum analogs radiopharmacokinetics of cisplatin and the use of cisplatin for the treatment of malignancies such as ovarian cancer and advanced adenocarcinoma of the prostate This monograph will be useful to oncologists and pharmacologists **Cisplatin** Archie W. The European School of Oncology came into existence to respond to a need for information education and training in the field of the diagnosis and treatment of cancer There are two main reasons why such an initiative was considered necessary Firstly the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated Secondly the rate of technological development that impinges on the diagnosis and treatment of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly With its residential courses for organ pathologies and the seminars on new techniques laser monoclonal antibodies imaging techniques etc or on the principal therapeutic controversies conservative or mutilating surgery primary or adjuvant chemotherapy radiotherapy alone or integrated it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice One of the more recent initiatives of ESO has been the institution of permanent study groups also called task forces where a limited number of leading experts are invited to meet once a year with the aim of defining the state of the art and possibly reaching a consensus on future developments in specific fields of oncology *The Chemotherapy Source Book* Michael Clinton Perry, 2008 The Chemotherapy Source Book Fourth Edition pulls together all the current information on the chemotherapeutic management of cancer patients including choice of chemotherapeutic agents use of combinations and toxicity of individual drugs Organized by disease site the book brings together pharmacologic and patient management information in one source that clinicians can consult for any question encountered in the delivery of chemotherapy This

updated Fourth Edition includes new drugs as well as new indications for older drugs Content has been streamlined to provide essential information more quickly for the busy practitioner Plus this edition is softcover for greater portability and convenience Cancer Treatment Reports ,1987 Transition Metal Complexes as Drugs and Chemotherapeutic Agents N. Farrell,2012-12-06 When this book was first conceived as a project the expanding interest in the clinical use of platinum and gold complexes made a survey of the relevant biological properties of metal complexes timely and appropriate This timeliness has not diminished during the gestation and final publication of the manuscript The introduction contains an explanation of the layout and approach to the book which I wrote as an overall survey of the wide variety of biological properties of metal complexes Hopefully the reader will see the parallels in mechanisms and behavior even in different organisms The writing was considerably helped by the enthusiasm and confidence totally unearned on my part in the project of Professor Brian James and owe him my special thanks I also owe a great debt of gratitude to my colleagues and especially to Eucler Paniago of the Universidade Federal de Minas Gerais for their comprehension and for the initial leave of absence which allowed me to begin the project To those who read some or all of the manuscript and made suggestions Bernhard Lippert Kirsten Skov and Tom Tritton as well as the editor's reviewer I am also grateful As usual the final responsibility for errors or otherwise rests with the author

Cancer Chemotherapy 1 Franco M. Muggia,2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in-depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Current Topics in Lung Cancer Paul A. Jr. Bunn,2012-12-06 The European School of Oncology came into existence to respond to a need for information education and training in the field of the diagnosis and treatment of cancer There are two main reasons why such an initiative was considered necessary Firstly the teaching of oncology requires a rigorously multidisciplinary approach which is difficult for the Universities to put into practice since their system is mainly disciplinary orientated Secondly the

rate of technological development that impinges on the diagnosis and treatment of cancer has been so rapid that it is not an easy task for medical faculties to adapt their curricula flexibly With its residential courses for organ pathologies and the seminars on new techniques laser monoclonal antibodies imaging techniques etc or on the principal therapeutic controversies conservative or mutilating surgery primary or adjuvant chemotherapy radiotherapy alone or integrated it is the ambition of the European School of Oncology to fill a cultural and scientific gap and thereby create a bridge between the University and Industry and between these two and daily medical practice One of the more recent initiatives of ESO has been the institution of permanent study groups also called task forces where a limited number of leading experts are invited to meet once a year with the aim of defining the state of the art and possibly reaching a consensus on future developments in specific fields of oncology

Cancer Chemotherapy by Infusion J.J. Lokich, 2012-12-06 Chemotherapy for cancer is in a state of evolution Because some cancers can now be cured with chemotherapy as a singular modality this therapy can no longer be viewed as simply a palliative contribution Chemotherapy has assumed an important role as an adjuvant to other modalities including both surgery and radiation therapy For some tumors the primary application of chemotherapy in a combined modality approach to curative therapy has resulted in the application of less radical surgery while achieving substantial of relatively rare tumors such as cure rates Nonetheless with the exception childhood tumors hematologic malignancies and testicular cancer the effectiveness of chemotherapy in most tumors is severely limited At the cellular level greater understanding of the specific mechanism of tumor cell killing and of the phenomenon of drug resistance are elusive critical ingredients in the improvement of effectiveness in cancer chemotherapy Prolonging the exposure time of the tumor cell to drugs is a concept that was addressed in the early phases of the development of chemotherapy However technological limitations inhibited the broader application of chemotherapy by infusion until recent years Also the convenience of intermittent therapy on an outpatient basis with the predominant theory of drug effect based on a dose response as well as the proven effectiveness of this schedule in some tumors has slowed the process of subjecting infusion chemotherapy to the rigors of clinical trials

Surgery in and around the Brain Stem and the Third Ventricle M. Samii, 2012-12-06 It is of course a real challenge to summon together an International Symposium in and around the Brain Stem and Third Ventricle Up to this moment the various experiences and papers on this subject were distributed throughout the world literature making it very difficult for someone interested in the matter to have access to the actual state of knowledge Therefore I believe such a meeting was long overdue and is a considerable attempt to open closed doors for present and future ambitious neurosurgical activities After succeeding in previous symposiums of similar interest in Hannover it was obvious that Prof Madjid Samii and his coworkers took the initiative of organizing such a meeting bringing together in the pure sense of the word Neurosurgeons with Anatomists Neurologists Neurophysiologists

Neuroradiologists ENT Maxillofacial Stereotactic and Radiosurgeons as well as other colleagues One contribution after the other followed from the basic sciences up to the operative management considering very new and actual concepts Through the application of new microsurgical techniques and the incorporation of new understanding for the many problems afflicting the midline of the eNS and based on a growing closer cooperation between the various disciplines a wide field has opened up which concerns us all

Platinum Coordination Complexes in Cancer Chemotherapy Miles P. Hacker, Evan B. Douple, Irwin H. Krakoff, 2012-12-06 The idea for convening a Fourth International Symposium on Platinum Coordination Complexes in Cancer Chemotherapy was born in an assembly of researchers from the Vermont Regional Cancer Center and the Norris Cotton Cancer Center who shared a common interest in metal complexes It was agreed by those assembled that sufficient time had passed since the Third International Symposium on Platinum Coordination Complexes in Cancer Chemotherapy held in 1976 at the Wadley Institutes of Molecular Medicine in Dallas Texas during which several advances in the chemistry biochemistry pharmacology and clinical use of platinum complexes had occurred to warrant a fourth symposium Furthermore intensive investigations in progress were bringing sophisticated methodologies to bear on the problems in the field clinical trials were yielding interesting results and unique approaches to cancer therapy were being designed Therefore an organizing committee was formed and planning culminated in the symposium which was held in Burlington Vermont June 22 24 1983

Platinum and Other Heavy Metal Compounds in Cancer Chemotherapy Andrea Bonetti, Roberto Leone, Franco Muggia, Stephen B. Howell, 2009-01-09 Cisplatin the first member of the family of platinum containing chemotherapeutic agents was discovered by Barnett Rosenberg in 1965 and approved by the FDA for marketing in 1978 After 30 years of use in the clinic cisplatin remains a central element of many treatment regimens Cisplatin is still an irreplaceable component of a regimen that produces high cure rates in even advanced nonseminomatous germ cell cancers and is widely used in the treatment of ovarian cancers and other gynecologic cancers head and neck and numerous other tumor types The development of carboplatin has reduced some of the adverse events associated with cisplatin treatment and the introduction of the DACH platinum compound oxaliplatin has broadened the spectrum of activity of the platinum compounds to include gastro intestinal cancers especially colorectal cancer The clinical importance of this family of drugs continues to drive investigation into how these drugs work and how to improve their efficacy and reduce their toxicity The papers in this volume were presented in Verona Italy during the tenth International Symposium on Platinum Coordination Compounds in Cancer Chemotherapy The symposium was jointly organized by the Department of Oncology of the Mater Salutaris Hospital Azienda Sanitaria Locale 21 of the Veneto Region and by the Department of Medicine and Public Health Section of Pharmacology the University of Verona They reflect the vitality of this field and the increasing use of new molecular and cell biologic genetic and biochemical tools to identify approaches to further improve their use

Lung Cancer: David J. Stewart, 2010-03-10 Defining the Lung Cancer Problem 1 Lung cancer is the leading cause of cancer death in the world It kills almost as many Americans as cancers of the breast prostate colon rectum pancreas and 2 kidney combined and accounts for 28.6% of all US cancer deaths With an increase in the 5 year relative survival rate from 13% to only 16% in the more than 230 years from 1974 to the present it will take us another 840 years to eradicate lung cancer deaths if we do not improve the current rate of progress As discussed in this text lung cancer prevention has received substantial attention The decrease in smoking in recent decades has helped but smoking is not the only problem Lung cancer in people who have never smoked is currently the 5th leading cause of cancer death in the United States Several factors contribute to the lethality of lung cancer including the rapidity of tumor growth advanced stage at diagnosis due to nonspecificity of early symptoms and the uncertain efficacy of screening early development of metastases and resistance to therapy Several chapters in this book discuss new molecular targets that may be potentially exploitable in the future as well as discussing our track record to date in exploiting them
