

A stylized, graphic illustration of a city skyline. The buildings are represented by various geometric shapes and are colored in a vibrant palette of orange, yellow, green, and pink. The style is reminiscent of mid-century modern graphic design. The skyline is set against a dark background, and the overall composition is framed by a large, curved, light-colored shape on the left side.

Community Criminology Ralph B. Taylor, 2015-01-09 For close to a century the field of community criminology has examined the causes and consequences of community crime and delinquency rates Nevertheless there is still a lot we do not know about the dynamics behind these connections In this book Ralph Taylor argues that obstacles to deepening our understanding of community crime links arise in part because most scholars have overlooked four fundamental concerns how conceptual frames depend on the geographic units and or temporal units used how to establish the meaning of theoretically central ecological empirical indicators and how to think about the causes and consequences of non random selection dynamics The volume organizes these four conceptual challenges using a common meta analytic framework The framework pinpoints critical features of and gaps in current theories about communities and crime connects these concerns to current debates in both criminology and the philosophy of social science and sketches the types of theory testing needed in the future if we are to grow our understanding of the causes and consequences of community crime rates Taylor explains that a common meta theoretical frame provides a grammar for thinking critically about current theories and simultaneously allows presenting these four topics and their connections in a unified manner The volume provides an orientation to current and past scholarship in this area by describing three distinct but related community crime sequences involving delinquents adult offenders and victims These sequences highlight community justice dynamics thereby raising questions about frequently used crime indicators in this area of research A groundbreaking work melding past scholarly practices in criminology with the field's current needs Community Criminology is an essential work for criminologists

Population Growth and Urban Systems Development G.A. van der Knapp, 2012-12-06 The study of the evolution of an urban system raises a number of practical questions as to the operational definition of the components of the system as well as to the incorporation of the factor time in the analysis In this chapter the focus is on the urban centres the nodes of the urban system One of the first problems to be solved now is the definition of such a node It has been argued above that population size can be used as an approximation of the complexity of the spatial economic structure of a region The

acceptation of this notion makes it possible to study the urban system as a population system The analysis of the population system over the study period will be pursued from this perspective The study period 1840 1970 covers completely the industrialization and urbanization phase which occurred during the industrial revolution Over this period the spatial organizational structure of society evolved from a rural commercial to wards a modern urban industrial state One of the major events in this period of change is the spatial redistribution of the population and the population growth This process will be examined below at three levels of aggregation 1 the population distribution as one frequency distribution 2 the population distribution disaggregated into a number of size classes and 3 the individual cities which make up the population distribution

The Myth of the North American City Michael Goldberg, John Mercer, 2011-11-01 The continuing tendency to continentalize Canadian issues has been particularly marked in the area of urban studies where United States based research findings methodologies and attitudes have held sway In this book Goldberg and Mercer demonstrate that the label North American City as widely used is inappropriate and misleading in discussion of the distinctive Canadian urban environment Examining such elements of the cultural context as mass values social and demographic structures the economy and political institutions they reveal salient differences between Canada and the United States One of the most important of the many contextual differences is the strong collective sense in Canada which accepts more public intervention in social and economic matters in contrast to the American commitment to individualism Canadians consequently expect a livable central city which is compact and well served by public transit and which has a fiscally sound local government To demonstrate these issues the discussion includes a detailed cross national empirical analysis of over 300 North American metropolitan areas along some three dozen dimensions including density transportation household change and structure income and fiscal disparities and economic structure Since much urban planning in Canada is based upon the continentalist assumption this volume should generate a reassessment of policy and encourage the development of a research base to suit the distinctiveness of the Canadian experience With growing pressures to take a North American view of Canadian policies it is vitally important that the differences delineated in this book are understood not just for their urban policy implications but for broader purposes as well
