Barrett,1996 The second phase centred around the 1960s as new theories sprang up and methods were refined in order to cope with doubts that a scientific study of culture had been established and with the recognition that change and conflict were as prevalent as stability and harmony The third phase began in the 1970s and continues today dominated by postmodernism and feminist anthropology One of my central arguments will be that beginning in phase two and growing rapidly during phase three a gap has emerged between our theories and our methods For most of the history of anthropology our methods have talked the language of science

**Contextualizing Systems Biology** Martin Döring,Imme Petersen,Anne Brüninghaus,Regine Kollek,2015-12-18 This collective monograph aims at contributing to an improved understanding of the epistemic presumptions sociocultural implications and historically backgrounds of the newly emerging and currently expanding approach of systems biology In doing so it offers empirically grounded valuable and reflexive information about a paradigmatic shift in the biosciences for a wide range of scientists working in the interdisciplinary areas of systems biology synthetic biology molecular biology biology

the philosophy of science the sociology of science and scientific knowledge science and technology studies technology assessment and the like The authors of this monograph share the theoretical methodological premise that science is a culturally and socially embedded practice which characterizes our culture as a scientific one and at the same time draws its innovative potential from its socio cultural context This dialectic relationship lies at the heart of the current development of systems biology which is conceived as a so called successor of omics research and triggered by high throughput information technologies At the same time a need for a holistic conceptualization of complex biological processes emerges The title Contextualizing Systems Biology suggests that this book analyzes the development and advent of systems biology from different theoretical and methodological perspectives We investigate a variety of contexts ranging from the analysis of cognitive contexts such as basic theoretical concepts to regulative contexts policies to the concrete application of a systems biology in the socio scientific context of a European research project In empirically analyzing these different and interrelated layers and dimensions of systems biology the scope of the book goes beyond present attempts to investigate the advent of new approaches in the biological sciences as it frames and assesses systems biology from an interdisciplinary and integrated perspective
