Neurology and Kindness David Parkes, 2024-09-15. This book about Medical Ethics, Religion, and Morals goes from the Clinic of Hippocrates under a Plane Tree on the Greek island of Cos to the small one-room Cottage Hospital in Capernaum of the Gospel of St Mark, staffed by two fishermen and Christ, to reach the Maudsley Hospital in London and UCLA in California. The book explores the brain-mind interface. Do the Mechanics of Neurology and the Mind of Kindness come from the same or different material? Are they similar or different in essence? The question was asked by Plato in ancient Greece, later by Descartes in France, in the twenty-first century in the Higher Cortical Functions of neuropsychologist Alexander Luria in Russia, Adam Zeman's Consciousness in Edinburgh, and by Oliver Sacks in the New York Review of Books. Neurology and Kindness deals with Neurology, Brain, Mind, and the innate human quality of Kindness, reinforced by the Love of Christianity, the Charity of Islam, the Duty of Judaism. It is written as a handbook for Nurses, Doctors, and also the Church, all who care for and help the sick.

Report of the Panel on Neurological Aspects of Behavior to the National Advisory Neurological and Communicative Disorders and Stroke Council National Advisory Neurological and Communicative Disorders and Stroke Council (U.S.). Panel on Neurological Aspects of Behavior, 1979 **Neurological, Psychiatric, and Developmental Disorders** Institute of Medicine, Board on Global Health, Committee on Nervous System Disorders in Developing Countries, 2001-02-01 Brain disorders, neurological, psychiatric and developmental now affect at least 250 million people in the developing world and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.
