The experiments manual is a lab manual for the beginning electronics student who does not have any previous experience in electricity or electronics. The experiments are coordinated with the text chapter by chapter. In total there are over 70 experiments starting with basic safety lab equipment and identification of electronic components. All basic aspects of circuit theory are covered. The enclosed CD ROM contains the MultiSIM textbook edition program and 40 simulation activities. These activities provide students with extra experience using the prelabs and with additional exercises including critical thinking and troubleshooting practice related to select hands-on experiments.

Zbar, Sidney Schildkraut, 1958 **Experiments Manual with simulation CD to accompany Grob's Basic Electronics: Fundamentals of DC/AC Circuits** Frank Pugh, Wes Ponick, 2006-03-31

This lab book written by Frank Pugh and Wes Ponick provides students and instructors with easy-to-follow laboratory experiments. The experiments range from an introduction to laboratory equipment to experiments dealing with filter applications. All experiments have been student tested to ensure their effectiveness. The lab book is organized to correlate with topics covered in the text chapter by chapter. All experiments have a MultiSim activity that is to be done prior to the actual physical lab activity. MultiSim files version 8 are included on a bound-in CD ROM. This prepares students to work with circuit simulation software and also to do pre-lab preparation before doing a physical lab exercise. MultiSim coverage also reflects the widespread use of circuit simulation software in today's electronic industries.
