Basic Fundamental Concepts:

BASIC, Fundamental Concepts Joseph C. Giarratano, 1982 *Teaching Fundamental Concepts of Informatics* Juraj Hromkovič, Rastislav Královic, Jan Vahrenhold, 2009-12-02 The International Conference on Informatics in Secondary Schools Evolution and Perspective ISSEP is an emerging forum for researchers and practitioners in the area of computer science education with a focus on secondary schools The ISSEP series started in 2005 in Klagenfurt and continued in 2006 in Vilnius and in 2008 in Torun The 4th ISSEP took part in Zurich This volume presents 4 of the 5 invited talks and 14 regular contributions chosen from 32 submissions to ISSEP 2010 The ISSEP conference series is devoted to all aspects of computer science teaching In the preface of the proceedings of ISSEP 2006 Roland Mittermeir wrote ISSEP aims at educating informatics proper by showing the beauty of the discipline hoping to create interest in a later professional career in computing and it will give answers different from the opinion of those who used to familiarize pupils with the basics of ICT in order to achieve computer literacy for the young generation This is an important message at this time when several countries have reduced teaching informatics to educating about current software packages that change from year to year The goal of ISSEP is to support teaching of the basic concepts and methods of informatics thereby making it a subject in secondary schools that is comparable in depth and requirements with mathematics or natural sciences As we tried to present in our book Algorithmic Adventures **FUNDAMENTAL CONCEPTS OF MACHINE LEARNING** Prof. Gaikwad Anil Pandurang, Prof. Krutika Balram Kakpure, Prof. Swayam Shashank Shah, Prof. Kulkarni Satish Gunderao, 2023-06-06 The term machine learning refers to a variety of computer technologies that make use of previous data in order to either enhance performance or develop more accurate predictions The term was coined by British computer scientist Stuart Russell The collective term for these many modes of instruction is deep learning In the context of this situation the term experience refers to the historical knowledge that has been amassed and is now accessible to the student This knowledge is what is supposed to be referred to as experience The vast majority of the time this information is stored in the form of electronic data that may be investigated when it is necessary to do so This data may be collected in the form of digitized human labeled training sets or it could be received in the form of any other kind of information that is gained by coming into touch with the environment When it comes to determining how accurate the predictions of a learner are the things that count the most are the kind of the object that is being anticipated as well as the quantity of that item that is being forecasted An example of a learning challenge would be to find a way to properly predict the topic of papers that have not been read by looking at a limited number of documents that have been selected at random and tagged with themes This might be accomplished by looking at a small number of documents that have been categorized In this scenario the student is challenged with coming up with a solution to the issue of how to accurately identify the topic of articles that have not yet been read If there are more persons involved in the sample then the task should in principle be simpler to finish However the level of difficulty of the

assignment also relies on the quality of the labels that were applied to the papers in the sample This will make the work more or less challenging Because of this the task might either become much simpler or significantly more challenging This is because some of the labels could not be completely correct and it also is depending on the number of subjects that can be accessed The process of machine learning calls for the development of prediction algorithms that are capable of producing outcomes that are both accurate and efficient
