Basic Processes in Memory Development

C.J. Brainerd, M. Pressley, 2013-11-11 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research e g logical and mathematical development development of learning All Progress volumes will be edited collections Editors of such collections upon consultation with the Series Editor may elect to have their books published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors are being published as separate volumes within the series

Handbook of Adult Development Jack Demick, Carrie

Andreoletti, 2012-12-06 This volume is an outgrowth of contemporary research on development over the adult lifespan which by now has burgeoned and developed both nationally and internationally However for us the impetus to be involved in this area was spawned and nurtured by our initial association with the Society for Research in Adult Development SRAD with its origins some 15 years ago by Michael Commons and his associates in Cambridge Massachusetts Through the good will and support of this society we also became and are still heavily involved with the Journal of Adult Development and the Kluwer Plenum Monograph Series on Adult Development and Aging of which this volume is a companion Many of the contributions in the volume are from SRAD members who consistently adhere to a focus on positive adult development Their chapters have been complemented by pieces from other researchers who have adopted more mainstream approaches to adult development and aging Regardless of the particular approach and or focus of the chapter all the work reported herein supports the relatively recent idea that development is not restricted to children and adolescents but continues throughout the adult lifespan in ways that we never envisioned some 20 years ago Thus the volume represents state of the art theory research and

practice on adult development which has the potential to occupy us all for some time to come Handbook of Psychology, Developmental Psychology Richard M. Lerner, M. Ann Easterbrooks, Jayanthi Mistry, 2003-03-04 Includes established theories and cutting edge developments Presents the work of an international group of experts Presents the nature origin implications and future course of major unresolved issues in the area **Communication and the Aging Process** Lois M.

Handbook of Adult Development and Learning Carol Hoare, 2006 Adult development and learning have always existed as two separate fields of study with development falling under psychology and learning under education. Recent advances in theory, research, and practice, however, have made it clear that an important reciprocal relationship exists between them. Advances in development frequently lead to learning, and conversely, learning quite often fuels development. The synchronicity between development and learning is responsible for positive changes in many capacities, including insight, intelligence, reflective and meta-cognition, personality expression, interpersonal competence, and self-efficacy. This synchronicity is also leading to the growth of a new discipline at the borders of adult development and learning. The *Handbook of Adult Development and Learning* is the first to bring together the leading scholars from both adult development and learning to explore what will form the foundation for this new discipline: the latest research at the intersection of these fields. It examines six major aspects of their intersection: foundations, key areas of integration, the self-system, higher reaches of development and learning, essential contexts, and specific applications. An introductory chapter explains why it is so important to recognize and fuel the growth of this new discipline. Subsequent chapters review the latest theoretical and empirical literature and provide a rich itinerary for future research. This handbook is a must-read for all who promote optimal aging. It will be an invaluable reference for scholars in development and education, as well as a rich resource for policy makers and practitioners such as corporate executives and human resource personnel.

Control of Human Behavior, Mental Processes, and Consciousness Walter J. Perrig, Alexander Grob, 2013-05-13 In this book, an international group of leading scientists present perspectives on the control of human behavior, awareness, consciousness, and the meaning and function of perceived control or self-efficacy in people's lives. The book breaks down the barriers between subdisciplines and thus constitutes an occasion to reflect on various facets of control in human life. Each expert reviews his or her field through the lens of perceived control and shows how these insights can be applied in practice.

The Aging Dimension Matilda White Riley, Joseph D. Matarazzo, Andrew Baum, 2024-05-10 Originally published in 1987, this volume and the working conference that preceded it broke new ground in addressing the complex topic of aging, health, and behavior. Taking a bio-behavioral approach to a range of topics, contributors to this book advanced their disciplines. This volume, as well as searching for important interfaces between behavior and health, also added the dynamic aspect of aging. Cells, organ systems, and whole human beings all change as they move through life, linking health in varied and intricate ways to changes in behavior, patterns, social structures, and cultural values and norms.

The Religious Education of Adults Leon McKenzie, R. Michael Harton, 2002 Increasingly, adults do not see the church as a credible provider of quality religious education. This revision by R. Michael Harton of the classic work by Leon McKenzie addresses the foundational issues of what constitutes such an education for adults and how ministers and teachers can determine and understand the needs of learners. It also offers ways to involve learners in the planning and execution of

their own religious education A must read for ministers and seminarians who care about the religious education of adults

Leon McKenzie is a retired professor of adult education at Indiana University where he also served as Director of Human Resource Development for Indiana University Hospital He received his Ed D in adult education from IU and has authored several books including *Adult Education and the Burden of the Future* and *Adult Education and World View Construction* He lives in Indianapolis R Michael Harton has authored several articles on local church adult education and contributed to *A Church's Ministry to Adults* and *Handbook on Adult Religious Education* A former congregational educator and seminary professor he now serves the Virginia Baptist Resource Center in Richmond Virginia and teaches adjunctively at the Baptist Theological Seminary at Richmond He received his Ed D in adult education and instructional systems technology from Indiana University

The Clinical Psychology of Aging Martha Storandt, Ilene C. Siegler, Merrill F. Elias, 2012-12-06 It has been estimated that there are at least 2 500 000 adults 10% of the population above age 65 who are currently in need of some sort of mental health services Kramer Taube and Redick 1973 Other estimates are even higher e g Pfeiffer 1977 It is expected that this number will increase as the number of older adults increases over the next 40 years Probably less than 400 clinical psychologists are now providing services to this age group The number of elderly patients actually seen by these psychologists is very very small One national survey found that of 353 psychologists who reported that they had older clients only 495 individuals were seen for psychological testing and 1423 for psychotherapy in the one month just prior to the response Dye in press Assuming

that the same individuals were not seen for both testing and therapy within the one month period a questionable assumption approximately 08% of the at least two and one half million older adults in need of psychological services are now being supplied with these services in some form or another Thus the need for increased involvement of clinical psychology with the aged is undeniable However few resources currently exist which will serve to increase the number of clinical psychologists trained to meet this need Probably less than 100 clinical psychologists living today have received any kind of formal graduate training in the clinical psychology of the aging Storandt 1977 **Handbook of Life-Span Development** Karen L.
