Entropic Creation Helge S. Kragh, 2016-04-29 Entropic Creation is the first English language book to consider the cultural and religious responses to the second law of thermodynamics from around 1860 to 1920 According to the second law of thermodynamics as formulated by the German physicist Rudolf Clausius the entropy of any closed system will inevitably increase in time meaning that the system will decay and eventually end in a dead state of equilibrium Application of the law to the entire universe first proposed in the 1850s led to the prediction of a future heat death where all life has ceased and all organization dissolved In the late 1860s it was pointed out that as a consequence of the heat death scenario the universe can have existed only for a finite period of time According to the entropic creation argument thermodynamics warrants the conclusion that the world once begun or was created It is these two scenarios allegedly consequences of the science of thermodynamics which form the core of this book The heat death and the claim of cosmic creation were widely discussed in the period 1870 to 1920 with participants in the debate including European scientists intellectuals and social critics among them the physicist William Thomson and the communist thinker Friedrich Engels One reason for the passion of the debate was that some authors used the law of entropy increase to argue for a divine creation of the world Consequently the second law of thermodynamics became highly controversial In Germany in particular materialists and positivists engaged in battle with Christian mostly Catholic scholars over the cosmological consequences of thermodynamics This heated debate which is today largely forgotten is reconstructed and examined in detail in this book bringing into focus key themes on the interactions between cosmology physics religion and ideology and the public way in which these topics were discussed in the

latter half of the nineteenth and the first years of the twentieth century **Creation and the World of Science** A. R. Peacocke, 2004-03-18 A R Peacocke's *Creation and the World of Science* an expanded version of his 1978 Bampton Lectures was widely recognized as a key work on the relation of the sciences to religion in general and Christian theology in particular It has long been seen as a formative contribution to the wide ranging investigations which now internationally constitute this intensely active field This new reprinting contains the original and influential text and also contains a newsupplement containing key references to the literature of recent years as well as indicating the author's current position on central themes It constitutes an essential reference and starting point for the contemporary discussion of key issues in the dialogue between the sciences and theology *God, Humanity and the Cosmos* Christopher Southgate, 2005-10-29 Contributors include Christopher Southgate John Hedley Brooke Celia Deane Drummond Paul D Murray Michael Robert Negus Lawrence Osborn Michael Poole Jacqui Stewart Fraser Watts David Wilkinson This fully revised and updated edition of *God Humanity and the Cosmos* includes new chapters by John Hedley Brooke Paul D Murray and David Wilkinson In addition to a systematic exploration of contemporary perspectives in physics evolutionary biology and psychology as they relate to theological descriptions of the universe humanity and consciousness the book now provides a thorough survey of the theological philosophical and historical issues underpinning the science religion debate Contributors also examine such issues as theological responses to the ecological crisis and to biotechnology how science is treated and valued in education and the relation of science to Islamic thought Dr Christopher Southgate is Lecturer in Theology at the University of Exeter

Science and Religion in Partnership Christian Ehemann, 2024-01-02 Today's religions find themselves in conflict with modern science If the laws of physics always hold as science claims how could the miracles have occurred that are reported in sacred texts How could God intervene in the world today to answer someone's prayer This book looks for evidence that there is a spiritual reality in addition to a material reality and finds ample evidence that both realities are part of the universe in which we live It is the rapid development of science over the past three hundred years and the much slower evolution of religious thought that is the source of today's conflicts A satisfactory understanding of our universe requires a partnership between science and religion in which these major areas of thought and knowledge each learn from the other This understanding must begin with mutual agreement as to what the major components of the universe are The existence of material reality is not disputed This book provides a survey of what else exists For each nonmaterial entity considered the evidence is examined for consistency with the findings of science Many inanimate entities are investigated including mathematical objects laws of nature love and justice Animate nonmaterial entities investigated include a supreme spiritual being and human souls A supreme spiritual being need not be a personal god and reaching that conclusion requires careful analysis of additional data from a variety of sources Special attention is given to the relationship between Jesus and this personal God Following the survey of nonmaterial reality this book investigates some of the additional implications of science

for religious belief and for religious practice Topics covered here include implications of science as they relate to the effectiveness of prayer revelation religious ritual the focus of religious life and the afterlife

A Modern Relation of Theology and Science Assisted by Emergence and Kenosis Bradford McCall, 2018-02-28 How should we attempt to understand the relationship between theology and science in the twenty first century In this book I will attempt to answer this question by examining several previous attempts to classify this relationship I also develop my personal view of the relation thereafter discussing some Catholic contributions to this project and then revisit some of my previously published material highlighting the role of panentheism therein and noting an emergent implication from the literature the resultant possibilities for God an implication that creates space for a broadly relational perspective of the process of emergence These movements allow me to argue that kenosis and emergence can add to the discussion of understanding the theology and science relationship Herein I advocate a monistic process based view of the overlapping relationship between theology and science

The Godless Delusion Joe Egan, 2009 In a recent work Richard Dawkins posed an immense challenge to theology by arguing on scientific grounds that the existence of God is so improbable that it can be safely dismissed as a delusion This work responds to the challenge by examining the arguments put forward by Dawkins and subjecting them to critique in the light of Christian faith The critique probes some of the assumptions underlying scientific endeavours about the nature of reality and it brings to the surface the question of how meaning truth and freedom are properly to be understood The work goes on to present a theological understanding of these realities in the light of Christian beliefs in God in Jesus Christ in creation and in redemption Far from denying the importance of scientific endeavours and discoveries this approach seeks to provide a framework in which they can be meaningfully situated for the betterment of humanity as a whole

Third Displacement John Hart, 2020-02-05 The question Are we alone in the cosmos has been answered We are not alone Geologist paleontologist Pierre Teilhard de Chardin SJ stated as early as the mid 1920s that intelligent life likely exists elsewhere and distinguished scientists of today including Harvard biologist E O Wilson Cambridge cosmologist Stephen Hawking astrophysicist and noted UAP researcher Jacques Vallee astronomer Allen Hynek and many others concur The oral traditions of Native American elders teach that they have interacted periodically with Star People who are respected ancestors Credible witness participants today describe abductions by benevolent and malevolent Others Discoveries by the Kepler Hubble and Gaia space telescopes ground based arrays of radio telescopes and TESS Transiting Exoplanet Survey Satellite suggest that in the Milky Way twenty five billion planets are in the life friendly Goldilocks Zone In Third Displacement Cosmobiology Cosmolocality Cosmosocioecology author John Hart links experiences with research in science based and Spirit focused books and articles including narratives about close encounters with Visitors from elsewhere in space ETI or Others from other cosmos dimensions IDI in examination of the claim that Intelligent ExoEarth life exists that Otherkind has visited humankind

Dusty Earthlings John Mustol, 2012-08-20 The Lord God formed a man from the dust of the ground Gen 2 7

Made of dust we humans are thoroughly physical beings We are dusty earthlings As such we are also ecological beings or rather eco physical beings firmly embedded in and dependent upon God s earthly ecosystems that support and provide for us and constitute our earthly home Today we are living in ways that are damaging our home As Christian dusty earthlings we are called to oversee God s earthly creation and to follow Jesus Christ God incarnated as a dusty earthling How do we do this in the face of the array of ecological problems we face today How can we obey the ecological principles and limits that govern all of life on God s good earth I suggest that the virtues of humility voluntary self limitation and the principles of kenosis and justice will help as we seek to follow Jesus as dusty earthlings in today s world Freedom and Possibility

Prusak, Bernard P.,2023 God omnipotent in love has created freedom and possibility whereas hierarchical dominance within the church limits the role of baptized women and men The book considers the ongoing adventure of God acting through the randomness and chance of the evolutionary process whereby matter became life and life became self conscious spirit with freedom God s creation of freedom has been pivotal in the theology of the younger Joseph Ratzinger and of Karl Rahner Edward Schillebeeckx and others Making room for human freedom involves thinking about God s patience defenselessness and vulnerability particularly as made clear in the humanity of Jesus By creating humans with their finite and free will God has voluntarily renounced power and control And as Walter Kasper has emphasized if the Church is to be a credible advocate for human rights and freedom in the world it must assess its own record and plan to integrate freedom into its internal structures

Divine Disorder and the Rescue of God Mark Corner,2024-02-13 Divine Disorder and the Rescue of God is based on the idea that a kenotic approach is essential to a viable theology It is deeply influenced by the way such an approach influenced the writings of Donald MacKinnon Part I argues that God forces us to live in a state of uncertainty even about God s existence However compelling the sense of God s presence may be religious experience cannot take that uncertainty away We have to understand what sort of God would want to impose upon us the disorder of uncertainty Part II explores this further in terms of God s willingness to give a degree of independence to the created order while Part III compares the instability of the created order with that of the moral order By giving human beings freedom God opens up the possibility of failure including that of God The doctrine of the fall expresses the impossibility of giving human beings autonomy without risking disaster In Parts IV and V the book looks more closely at the nature of this God who embraces risk suffering and even failure Who is the deity behind this divine disorder The focus from a Christian perspective is upon the risk suffering and failure displayed in the life of Christ Jesus is drawn into something that it is beyond him to fathom hence the troubled uncertain character of his own life But from a kenotic perspective even a life marked by failure can be the focal point of God s self revelation Dimensions of Faith

Steve Donaldson,2015-07-28 In Dimensions of Faith cognitive scientist Steve Donaldson takes readers on a journey from the world of assumptions set minds widely varying beliefs and popular misconceptions to an understanding of the true essence and role of faith as the natural and inevitable product of brains Using

numerous illustrations and examples Donaldson shows how faith is necessitated by a variety of unavoidable limitations exposes the myth of a divide between faith and critical thinking provides practical advice for crafting coherent beliefs and explains why there can never be such a place as Factland Along the way he takes a special look at religious faith evaluating its attributes exploring its relation to other manifestations of faith investigating whether God has done his job well enough to warrant the faith placed in him and pondering how truth seekers can sometimes end up in very different places

Perspectives on the Age of the Earth and Why They Matter Francis Ö. Dudás, 2020-02-13 Polls show almost half of US adults believe that Earth is only 10 000 years old whereas scientists consider our planet to be 4 56 billion years old Examining these conflicting views illuminates aspects of the perceived conflict between religion and science and helps us understand the battles between evolutionist and creationist advocates This book examines how we approach knowledge and how we look at certainty It disentangles the threads of the traditional knowledge we are taught from the knowledge we gain from our own investigation of truth It argues that nature the basis of science and scripture the basis of religion derive from a single source Because of their shared origins religious and scientific perspectives grounded in verifiable truths must be in harmony The book presents the science behind the reliability of isotopic dates and critiques young earth creationist attacks on isotopic studies Though the nature of time is a philosophical issue its measurement is a scientific venture that has affirmed that Earth is 4 56 billion years old The harmony of science and religion based on recognition of their single source is a prerequisite for the progress of humanity as a whole

Reframing Providence Simon Maria Kopf, 2023 The doctrine of providence which states that God guides his creation has been widely conceived in action terms in recent theological scholarship Instead of recalibrating the much discussed non interventionist objective divine action NIODA approaches Simon Maria Kopf advocates a reframing of providence in terms of the virtue of prudence
