Arms And Artificial Intelligence Weapon And Arms Control Applications Of Advanced Computing:

Arms and Artificial Intelligence Stockholm International Peace Research Institute, 1987 The impact of information technology in the field of military decision making is superficially less visible than that of a number of other weapon developments though its importance has grown steadily since the beginning of the 1980s Owing to its potential role in modern weapon systems and the prospect of its inclusion as an essential ingredient in many military projects such as the Strategic Defence Initiative it has become the focus of special interest and efforts This book is the first attempt to present a broad overview of the prospects for information technology in general and machine intelligence in particular in the context of international security The dangers and promises of weapon and arms control applications of computers and artificial intelligence to decision making processes are analysed in a technical strategic and political perspective by experts from six different countries In an introductory chapter Allan Din presents a generic overview of artificial intelligence and its prospects Thirteen contributors then discuss the conceptual and technical framework of artificial intelligence analyse implications for weapon systems and strategy and discuss possible applications to arms control verification and modelling **The ABM Treaty** Walther Stützel, Bhupendra Jasani, Regina Cowen Karp, 1987 The current debate on the Anti Ballistic Missile Treaty a matter of considerable significance for East West relations and international security is examined by thirteen authors selected from the international community for their expertise In the introduction the three editors from the Stockholm International Peace Research Institute highlight the complexities of the problems involved and identify possible solutions Ambassadors Gerard Smith and Vladimir Semenov the two negotiators of the 1972 Treaty give their views and subsequent papers address the significance of the current US and Soviet interpretations of such issues as space based defences The grey areas in the Treaty are highlighted and the much neglected implications for the international community in general and the small nuclear powers and alliances in particular are presented *Skill and Education: Reflection and Experience* Bo Göransson, Magnus Florin, 2012-12-06 This book has an important starting point in the conference held in Stockholm in May June 1988 on Culture Language and Artificial Intelligence It assembled more than 300 researchers and practitioners in the fields of technology philosophy history of ideas literature linguistics social science etc The conference was an initiative from the Swedish Center for Working Life based on the project AI Based Systems and the Future of Language Knowledge and Responsibility in Professions within the COST 13 programme of the European Commission Participants in the conference and researchers related to its aims were chosen to contribute to this book It is preceded by Knowledge Skill and Artificial Intelligence ed B G Göransson and I Josefson Springer Verlag 1988 Artificial Intelligence Culture and Language ed B G Göransson and M Florin Springer Verlag 1990 and Dialogue and Technology Art and Knowledge ed B G Göransson and M Florin Springer Verlag 1991 The two latter books have the same conference connection as this one and their aim is to present the contours of a research field with a multitude of issues that demands thorough investigation The contributors thinking in this field varies

greatly so do their styles of writing For example contributors have varied in their choice of he or she for the third person No distinction is intended but chapters have been left with the original usage to avoid extensive changes Similarly individual contributors preference as to notes or reference lists have been followed **Superpowers at Sea** Richard W.

Fieldhouse, Shunji Taoka, 1989 The arms race at sea is a dangerous nuclear race which is causing growing international concern and must be brought under control What are the hard facts about the situation This book documents the realities of the competition especially the nuclearization of naval forces and dispels some of the myths surrounding the naval arms race This incisive analysis of naval forces of the East and West concludes that contrary to common perceptions the US and its allies have a considerable military advantage over the Soviet Navy a trend which is expected to continue for the foreseeable future The authors describe in detail the widespread nuclearization of naval forces of all five nuclear navies analyse the implications for security and arms control and conclude with suggestions for possible arms control measures **Deterrence**

under Uncertainty: Edward Geist, 2023-10-10 For decades films such as WarGames and The Terminator have warned that the combination of artificial intelligence and nuclear weapons might be a recipe for an apocalypse Might these prophecies of doom become reality in coming decades Using insights from computer science Deterrence under Uncertainty Artificial Intelligence and Nuclear Warfare evaluates how AI could make nuclear war winnable and whether that possibility is likely Detailed chapters explain how the landscape of nuclear deterrence is changing and debunks the myths of machine intelligence and nuclear weapons This book gives a practitioner's perspective on how artificial intelligence and other emerging technologies could change the role of nuclear weapons in international relations **Disruptive Technologies for**

the Militaries and Security Ajey Lele, 2018-12-28 This book debates and discusses the present and future of Disruptive Technologies in general and military Disruptive Technologies in particular Its primary goal is to discuss various critical and advanced elucidations on strategic technologies The focus is less on extrapolating the future of technology in a strict sense and more on understanding the Disruptive Technology paradigm It is widely accepted that technology alone cannot win any military campaign or war However technological superiority always offers militaries an advantage More importantly technology also has a great deterrent value Hence on occasion technology can help to avoid wars Accordingly it is important to effectively manage new technologies by identifying their strategic utility and role in existing military architectures and the possible contributions they could make towards improving overall military capabilities This can also entail doctrinal changes so as to translate these new technologies into concrete advantages **Killer Robots** Armin Krishnan, 2016-04-22 Military

robots and other potentially autonomous robotic systems such as unmanned combat air vehicles UCAVs and unmanned ground vehicles UGVs could soon be introduced to the battlefield Look further into the future and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions This growing automation of warfare may come to represent a major discontinuity in the history of warfare humans will first be removed from the battlefield and may

one day even be largely excluded from the decision cycle in future high tech and high speed robotic warfare Although the current technological issues will no doubt be overcome the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns Armin Krishnan explores the technological legal and ethical issues connected to combat robotics examining both the opportunities and limitations of autonomous weapons He also proposes solutions to the future regulation of military robotics through international law

Bases Abroad Robert E. Harkavy, 1989 Analyzing the modern status of military bases and the diplomacy that defines their location and access this book explores the global basing networks of the world's major military powers their type location and the politics and economics of their acquisition It provides data on armaments intelligence communications research and space facilities tables and maps that display U S and Soviet global networks and the various military roles and nuclear deterrence capabilities for global power projection and support of client states in the Third World Harkavy also discusses emerging political and technological developments that could alter basing diplomacy

Postmodern War Chris Hables Gray, 2013-11-12 Postmodern War poses an urgent challenge to the ways we conceptualize and actually wage war in our high technology age Computerization and artificial intelligence have brought about a revolution in warfare spawning both increasingly powerful weapons and a rhetoric which disguises their apocalyptic potential in catch phrases like smart weapons and bloodless combat Postmodern War examines contemporary practices of war defining and critiquing trendy military doctrines hidden behind phrases like Infowar and Cyberwar the roles of those who manipulate high technology those who are manipulated by it and those who are increasingly merging with it the role of peace activists and socially responsible scientists in countering dangerous assumptions made by a postmodern military Far from opposing technological change however Gray finds new hopes for peace in the twenty first century Provocative and far reaching in its scope the book argues that postmodern war has left us poised between the most dreadful and most utopian of alternatives we may eradicate either the human race or war itself

Research Handbook on Warfare and Artificial Intelligence Robin Geiß, Henning Lahmann, 2024-07-05 The Research Handbook on Warfare and Artificial Intelligence provides a multi disciplinary exploration of the urgent issues emerging from the increasing use of AI supported technologies in military operations Bringing together scholarship from leading experts in the fields of technology and security from across the globe it sheds light on the wide spectrum of existing and prospective cases of AI in armed conflict
