Process-Based QMS Dennis R. Arter, Charles A. Cianfrani, John (Jack) E. West, 2012-08-17 This book is intended to help those involved in managing and conducting audits to ISO 9001 2008. It can be used as a guide to establishing a new audit program or for revitalizing one that has been operational for some time. It focuses on achieving an audit program that produces value adding results for the organization. Arter, Cianfrani, and West experts in both ISO 9001 and auditing believe that the art and science of auditing quality management systems that have been designed and implemented following the process approach. The foundation of ISO 9001 2008 is more challenging and interesting than auditing discrete elements to determine whether documented procedures and records exist. Auditing a process based QMS or even small elements of such a system requires auditors to understand and integrate into an audit all aspects of organizational activities from high level planning through ensuring that customers are satisfied. The role of auditing is evolving and the skills and competence required to do it well also must evolve. The contents of this book will help auditors understand their role in the organization and discharge their auditing duties in a way that is challenging to them and contributes to the success of the organization.

Managing Service Delivery Processes Jean Harvey, 2005-06-07 The quest for value drives customer behavior in the services marketplace. This book focuses on complex service processes and is written for professionals, quasi professionals and technical workers laboring in all spheres from law to medicine and accounting to engineering. It draws its theory and examples from these professional services and many more with hands on end of chapter exercises on all topics. A framework is presented for understanding how a set of shared fundamental beliefs drives the best in class professional service organizations in their learning which is the source of sustained competitive advantage. Products and processes can be imitated or copied but learning faster than your competition cannot. Processes create the benefits customers want by delivering the service or by making this delivery possible in one way or another.
