## **Agent Intelligence Through Data Mining:**

**Agent Intelligence Through Data Mining** Andreas L. Symeonidis, Pericles A. Mitkas, 2005-07-15 This book addresses the use of data mining for smarter more efficient agents as well as the challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity Following a brief review of data mining and agent technology fields the book presents a methodology for developing multi agent systems describes available open source tools and demonstrates the application of the methodology on three different cases

**Agent Intelligence Through Data Mining** Andreas L. Symeonidis, Pericles A. Mitkas, 2006-05-06 Knowledge hidden in voluminous data repositories routinely created and maintained by today's applications can be extracted by data mining The next step is to transform this discovered knowledge into the inference mechanisms or simply the behavior of agents and multi agent systems Agent Intelligence Through Data Mining addresses this issue as well as the arguable challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity This book contains a methodology tools and techniques and several examples of agent based applications developed with this approach This volume focuses mainly on the use of data mining for smarter more efficient agents Agent Intelligence Through Data Mining is designed for a professional audience of researchers and practitioners in industry This book is also suitable for graduate level students in computer science

**Autonomous Intelligent Systems: Multi-Agents and Data Mining** Vladimir Gorodetsky, Chengqi Zhang, Victor Skormin, Longbing Cao, 2007-07-23 This book constitutes the refereed proceedings of the Second International Workshop on Autonomous Intelligent Systems Agents and Data Mining AIS ADM 2007 held in St Petersburg Russia in June 2007 The 17 revised full papers and six revised short papers presented together with four invited lectures cover agent and data mining agent competition and data mining as well as text mining semantic Web and agents

**Autonomous Intelligent Systems: Agents and Data Mining** Vladimir Gorodetsky, Jiming Liu, Victor A. Skormin, 2005-05-20 This volume contains the papers presented at the International Workshop Autonomous Intelligent Systems Agents and Data Mining AIS ADM 2005 held in St Petersburg Russia during June 6-8 2005

**Data Mining and Multi-agent Integration** Longbing Cao, 2009-07-25 Data Mining and Multi agent Integration aims to reflect state of the art research and development of agent mining interaction and integration for short agent mining The book was motivated by increasing interest and work in the agents data mining and vice versa The interaction and integration comes about from the intrinsic challenges faced by agent technology and data mining respectively for instance multi agent systems face the problem of enhancing agent learning capability and avoiding the uncertainty of self organization and intelligence emergence Data mining if integrated into agent systems can greatly enhance the learning skills of agents and assist agents with predication of future states thus initiating follow up action or intervention The data mining community is now struggling with mining distributed interactive and heterogeneous data sources Agents can be used to manage such data sources for data access monitoring integration and pattern merging from

the infrastructure gateway message passing and pattern delivery perspectives These two examples illustrate the potential of agent mining in handling challenges in respective communities There is an excellent opportunity to create innovative dual agent mining interaction and integration technology tools and systems which will deliver results in one new technology

#### Computational Collective Intelligence. Semantic Web, Social Networks and Multiagent Systems Ryszard

Kowalczyk, 2009-09-23 Computational collective intelligence (CCI) is most often understood as a subfield of artificial intelligence (AI) dealing with soft computing methods that enable group decisions to be made or knowledge to be processed among autonomous units acting in distributed environments. The needs for CCI techniques and tools have grown significantly recently as many information systems work in distributed environments and use distributed resources. Web-based systems, social networks and multi-agent systems very often need these tools for working out consistent knowledge states, resolving conflicts and making decisions. Therefore CCI is of great importance for today's and future distributed systems. Methodological, theoretical and practical aspects of computational collective intelligence such as group decision making, collective action coordination and knowledge integration are considered as the form of intelligence that emerges from the collaboration and competition of many individuals, artificial and/or natural. The application of multiple computational intelligence technologies such as fuzzy systems, evolutionary computation, neural systems, consensus theory etc. can support human and other collective intelligence and create new forms of CCI in natural and/or artificial systems. *Intelligent*
