Aggression Its Causes Consequences And Control:

Aggression Leonard Berkowitz, 1993 The book focuses primarily on the social psychology of aggressive behaviors providing coverage of laboratory field and survey research findings in the field as well as an integrated analysis of the significance of these findings Aimed at the intelligent lay person as well as students and professionals in the field the author presents a critical evaluation of the host of theories about the whys of aggression The book discusses the reasons for and possible prevention of one of the most pressing problems in our society

Aggression Leonard Berkowitz, 1993 In this wide ranging discussion of the social psychology of human aggression Leonard Berkowitz examines the findings of behavioral research about conditions and circumstances that promote anger and aggression Emphasizing that aggression takes numerous forms and has many causes Berkowitz distinguishes between instrumental aggression assaults carried out to benefit the attacker in some way and emotional impulsive or expressive aggression He points out that they have different origins and aims and are best controlled in different ways Although he gives much attention to the conditions promoting deliberate instrumental aggression Berkowitz also shows that many assaults are highly emotional acts He therefore considers conceptions of emotion and the nature of anger and offers a new theory of the factors affecting impulsive aggression The discussion throughout is based on both laboratory experiments and real world field studies Berkowitz summarizes what behavioral scientists have learned about the nature of highly aggressive personalities and the family and childhood backgrounds of those who are disposed to violent antisocial behavior He also reports important studies of the effects of violence depicted in the mass media In discussing conditions that lead to child abuse spouse battering and murder Berkowitz identifies such risk factors as childhood experiences frustration poverty and personal and social stresses as well as external events and situations that bring hostile ideas to mind He also examines biological influences such as hereditary factors hormones and alcohol that promote aggressive tendencies Reviewing studies of the use of punishment and legal controls e g the death penalty gun control laws the author discusses how this socially destructive behavior might be reduced He presents research on the effectiveness of various psychological procedures including the supposedly cathartic methods instrumental training and cognitive and anger control techniques This general introduction to the research and theorizing about human aggression seeks to promote understanding of the fundamental causes of destructive conduct the conditions that can increase the chances of aggressive behavior and the most effective steps that could be taken to reduce the likelihood of violence in society

area **International Handbook of Violence Research** Wilhelm Heitmeyer, John Hagan, 2005-08-12 An international manual is like a world cruise a once in a lifetime experience All the more reason to consider carefully whether it is necessary This can hardly be the case if previous research in the selected field has already been the subject of an earlier review or even several competing surveys On the other hand more thorough study is necessary if the intensity and scope of research are increasing without comprehensive assessments That was the situation in Western societies when work began on this project in the summer of 1998 It was then too that the challenges emerged any manual especially an international one is a very special type of text which is anything but routine It calls for a special effort the state of the art has to be documented for selected subject areas and its presentation made as compelling as possible The editors were delighted therefore by the cooperation and commitment shown by the eighty one contributors from ten countries who were recruited to write on the sixty two different topics by the constructive way in which any requests for changes were dealt with and by the patient response to our many queries This volume is the result of a long process It began with the first drafts outlining the structure of the work which were submitted to various distinguished colleagues Friedheim Neidhardt of Berlin Gertrud Nunner Winkler of Munich and Roland Eckert of Trier to name only a few supplied valuable comments at this stage **The Social Psychology of Aggression** Barbara Krahé, 2013-02-11 The second edition of this textbook provides a thoroughly revised updated and expanded overview of social psychological research on aggression The first part of the book covers the definition and measurement of aggression presents major theories and examines the development of aggression It also covers the role of situational factors in eliciting aggression and the impact of using violent media The second part of the book focuses on specific forms and manifestations of aggression It includes chapters on aggression in everyday life sexual aggression and domestic violence against children intimate partners and elders There are two new chapters in this part addressing intergroup aggression and terrorism The concluding chapter explores strategies for reducing and preventing aggression The book will be essential reading for students and researchers in psychology and related disciplines It will also be of interest to practitioners working with aggressive individuals and groups and to policy makers dealing with aggression as a social problem **Neuroscience of Aggression** Klaus A.
