Design of High-speed Communication Circuits Ramesh Harjani,2006 MOS

technology has rapidly become the de facto standard for mixed signal integrated circuit design due to the high levels of integration possible as device geometries shrink to nanometer scales The reduction in feature size means that the number of transistor and clock speeds have increased significantly In fact current day microprocessors contain hundreds of millions of transistors operating at multiple gigahertz Furthermore this reduction in feature size also has a significant impact on mixed signal circuits Due to the higher levels of integration the majority of ASICs possesses some analog components It has now become nearly mandatory to integrate both analog and digital circuits on the same substrate due to cost and power constraints This book presents some of the newer problems and opportunities offered by the small device geometries and the high levels of integration that is now possible The aim of this book is to summarize some of the most critical aspects of high speed analog RF communications circuits Attention is focused on the impact of scaling substrate noise data converters RF and wireless communication circuits and wireline communication circuits including high speed I/O

IUTAM Symposium on Chaotic Dynamics and Control of Systems and Processes in Mechanics Giuseppe Rega,F. Vestroni,2006-06-22 The interest of the applied mechanics community in chaotic dynamics of engineering systems has exploded in the last fifteen years although research activity on nonlinear dynamical problems in mechanics started well before the end of the Eighties It developed first within the general context of the classical theory of nonlinear oscillations or nonlinear vibrations and of the relevant engineering applications This was an extremely fertile field in terms of formulation of mechanical and mathematical models of development of powerful analytical techniques and of understanding of a number of basic nonlinear phenomena At about the same time meaningful theoretical results highlighting new solution methods and new or complex phenomena in the dynamics of deterministic systems were obtained within dynamical systems theory by means of sophisticated geometrical and computational techniques In recent years careful experimental studies have been made to establish the actual occurrence and observability of the predicted dynamic phenomena as it is vitally needed in all engineering fields Complex dynamics have

been shown to characterize the behaviour of a great number of nonlinear mechanical systems ranging from aerospace engineering applications to naval applications mechanical engineering structural engineering robotics and biomechanics and other areas The International Union of Theoretical and Applied Mechanics grasped the importance of such complex phenomena in the Eighties when the first IUTAM Symposium devoted to the general topic of nonlinear and chaotic dynamics in applied mechanics and engineering was held in Stuttgart 1989 Smart Materials Kaushik Kumar,Chikesh
