Jeremy D. Wilson,Andrew D. Evans,Philip V. Grice,2009-07-09 This gripping and chillingly realistic novel from New York Times bestselling author Sharon Draper shows that all it takes is one bad decision for everything to change Diamond knows not to get into a car with a stranger But what if the stranger is well dressed and handsome On his way to meet his wife and daughter And casting a movie that very night a movie in need of a star dancer What then Then Diamond might make the wrong decision It s a nightmare come true Diamond Landers has been kidnapped She was at the mall with a friend alone for only a few brief minutes and now she s being held captive forced to endure horrors beyond what she ever could have dreamed while her family and friends experience their own torments and wait desperately for any bit of news From New York Times bestselling author Sharon Draper this is a riveting exploration of power how quickly we can lose it and how we can take it back *An Environmental History of Wildlife in England 1650 - 1950* Tom Williamson,2013-12-05 Choice Outstanding Academic Title 2014 While few detailed surveys of fauna or flora exist in England from the period before the nineteenth century it is possible to combine the evidence of historical sources ranging from game books diaries churchwardens accounts and even folk songs and our wider knowledge of past land use and landscape with contemporary analyses made by modern natural scientists in order to model the situation at various times and places in the more remote past This timely volume encompasses both rural and urban environments from 1650 to the mid twentieth century drawing on a wide variety of social historical and ecological sources It examines the impact of social and economic organisation on the English landscape biodiversity the agricultural revolution landed estates the coming of large scale industry and the growth of towns and suburbs It also develops an original perspective on the complexity and ambiguity of man animal relationships in this post medieval period *Birds and Habitat* Robert J. Fuller,2012-11-08 Synthesises important concepts patterns and issues relating to avian habitat selection drawing on examples from Europe North America and Australia **Drivers of Environmental Change in Uplands** Aletta Bonn,Tim Allott,Klaus Hubacek,Jon Stewart,2009-01-13 Addressing policy related issues providing up to date scientific background information and laying out pressing land management questions this interdisciplinary volume identifies and discusses key directions of environmental change in uplands as well as providing an outlook into future management and conservation options responding to these changes **Exploring Environmental History** T. C Smout,2011-08-16 This volume brings together the best of T C Smout s recent articles and contributions to books and journals on the topic of environmental history *Revealed Biodiversity* Eric L. Jones,2014 Revealed Biodiversity An Economic History of the Human Impact aims to show that for several centuries environmental conditions have been substantially the product of economic fluctuations It contests the notion of perpetual decline in species composition The arguments are supported by far more precise historical detail than is usual in books about ecology The need to take the gains

to human society into account when assessing environmental change is strongly emphasized The book features case studies including England the Netherlands USA East Asia Brazil and the areas of modern agricultural OCyland grabOCO This book is important for its close attention to the documented historical record of environmental change in several countries over several centuries for its demonstration of how much wildlife populations have been influenced by fluctuations in market activity for revealing the need to be sensitive to historical baselines and for emphasizing the imperative of taking the gains to human society into account when assessing environmental change It therefore has considerable significance for environmental and conservation policies as well as for future studies in ecological history

**Birds in Roman Life and Myth** Ashleigh Green,2023-03-03 This book explores the place of birds in Roman myth and everyday life focusing primarily on the transitional period of 100 BCE to 100 CE within the Italian peninsula A diverse range of topics is considered in order to build a broad overview of the subject Beginning with an appraisal of omens augury and auspices including the sacred chickens consulted by generals before battle it goes on to examine how Romans farmed birds hunted them and kept them as pets It demonstrates how the ownership and consumption of birds were used to communicate status and prestige and how bird consumption mirrored wider economic and social trends Each topic adopts an interdisciplinary approach considering literary evidence alongside art material culture zooarchaeology and modern ornithological knowledge The inclusion of zooarchaeology adds another dimension to the work and highlights the value of using animals and faunal remains to interpret the past Studying the Roman view of birds offers great insight into how they conceived of their relationship with the gods and how they stratified and organised their society This book is a valuable resource for bird lovers and researchers alike particularly those studying animals in the ancient world

[A History of Livestock and Wildlife](#) Eric Jones,2023-08-01 The use of wildlife products together with advances in livestock feeding were essential in propelling Western economic growth Extraordinarily these early modern and early industrial features are side lined relative to the role of manufacturing This book restores the balance detailing how many species were relocated around the world and how late natural products persisted into the age of synthetics This text describes how animals were driven immense distances to market and harnessed for transportation and to power machines even after industrialisation animals were employed for innumerable purposes besides being co opted as pets The recent rebound from a wholesale persecution of wild nature and how the plundering of the animal kingdom and the development of livestock farming jointly created the Smithian Growth that ushered in the Industrial Revolution are also described

[Germany's Nature](#) Thomas M. Lekan,Thomas Zeller,2005 Annotation Includes a survey of the country s natural and cultural landscapes Essays by scholars of history geography and the social sciences move beyond the Green movement to uncover enduring cultural patterns and social institutions This book is for students and professionals working in European history and the history of science and technology

**Temporal Dimensions of Landscape Ecology** John A. Bissonette,Ilse Storch,2007-08-08 Over the past twenty five years the effects of the spatial distribution and scaling of

resources on animal populations have been increasingly studied in wildlife biology landscape ecology conservation biology and related fields However spatial patterns change over time In *Temporal Dimensions of Landscape Ecology Wildlife Responses to Variable Resources* the authors discuss the effects that temporal changes in resources have on animal populations Resource availability and quality are not distributed homogeneously over time depending for example on predictable changes in seasons mating and birthing cycles unpredictable resource pulses and weather related phenomena ecological disturbances and historical legacies *Temporal Dimensions of Landscape Ecology* brings together chapters that address the idea of current as well as historical temporal influences on resource availability quality and distribution The authors draw attention to the neglected temporal issues so important to understanding species and community responses This book will be of interest to both wildlife and conservation students and practitioners working with temporal and spatial scale issues

**Natural Capital** Dieter Helm, 2015-05-12 Natural capital is what nature provides to us for free Renewables like species keep on coming provided we do not drive them towards extinction Non renewables like oil and gas can only be used once Together they are the foundation that ensures our survival and well being and the basis of all economic activity In the face of the global local and national destruction of biodiversity and ecosystems economist Dieter Helm here offers a crucial set of strategies for establishing natural capital policy that is balanced economically sustainable and politically viable Helm shows why the commonly held view that environmental protection poses obstacles to economic progress is false and he explains why the environment must be at the very core of economic planning He presents the first real attempt to calibrate measure and value natural capital from an economic perspective and goes on to outline a stable new framework for sustainable growth Bristling with ideas of immediate global relevance Helm s book shifts the parameters of current environmental debate As inspiring as his trailblazing *The Carbon Crunch* this volume will be essential reading for anyone concerned with reversing the headlong destruction of our environment

**A Less Green and Pleasant Land** Norman Maclean, 2015-04-16 This definitive survey reveals the changing nature of our wildlife why we should be concerned and what we can do about it

**Winged Worlds** Olga Petri, Michael Guida, 2023-06-26 This edited collection explores our often surprising modes of co inhabiting the cultural and aerial worlds of birds It focuses on our encounters with non captive birds and the cultural geographies of feathered flight This book offers a timely contribution to the more than human geographies of flight space and territory The chapters support an ethics of attention as a new basis for the conservation and cultivation of aerial habitats Contributions adopt an interdisciplinary approach to the patterns of intrusion and escape that shape our encounters with birds and unsettle our traditionally terrestrial concepts of space Each chapter focuses on a different aspect of our shared lives with birds ranging from scientific observation to the social media enabled spectacle of co habitation and spatial competition Written in a thought provoking style this book seeks to address a dearth of critical perspectives on the cultural geographies of flight and its implications for the ways in which we understand common spaces around and above us

in the context of any effort at conservation      **Rethinking Ancient Woodland** Gerry Barnes, Tom Williamson, 2015-10-01  
Ancient woodland is a term widely used in England for long established semi natural woods shaped by centuries of traditional management Such woods are often assumed to provide a direct link with the natural vegetation of England as this existed before the virgin forests were fragmented by the arrival of farming This groundbreaking study questions many of these assumptions Drawing on more than a decade of research in Norfolk the authors emphasize the essentially unnatural character of ancient woods      British Wildlife ,2003      *Feasting, Fowling and Feathers* Michael Shrubbs, 2013-09-26 A highly readable review of some 700 years of avian exploitation The way wild birds have been exploited over the centuries forms the focus of this remarkable new book by Michael Shrubbs It looks at the use of birds as food for feathers and skins for eggs as cage birds as specimens and for hunting focusing on Britain northern Europe and the North Atlantic Never before has a book brought the huge amount of information on these topics in the academic literature together under one cover Introductory chapters on what was taken when why and its impact are followed by a number of sections looking in detail at important bird groups Along with discussions of broader themes of exploitation the book is packed with amazing facts For example we learn why Grey Herons were so important in medieval falconry why the Black Death was good news for bustards why Napoleon is to blame for the scarcity of Quail in Britain today when tame plover stew was all the rage The book concludes with discussions of the cage bird and plumage trades both now consigned to the annals of history in Britain at any rate As well as summarising and condensing the material into a readable and entertaining account Shrubbs goes back to the original sources This has allowed him to shed new and surprising light on the biogeography of a number of British birds

Ornithology Michael L. Morrison, Amanda D. Rodewald, Gary Voelker, Melanie R. Colón, Jonathan F. Prather, 2018-09-03  
The essential text for ornithology courses this book will leave students with a lifelong understanding and appreciation of the biology and ecology of birds Aves the birds is the wildlife group that people most frequently encounter With over 10 000 species worldwide these animals are part of our everyday experience They are also the focus of intense research and their management and conservation is a subject of considerable effort throughout the world But what are the defining attributes that make a bird a bird Aimed at undergraduate and graduate students Ornithology provides a solid modern foundation for understanding the life and development of birds Written by renowned experts from around the globe this comprehensive textbook draws on the latest research to create an innovative learning experience Moving beyond bones muscle and feathers it provides the core information needed to build the bird linking anatomy and physiology with ecology and behavior As it reviews the major orders of birds the book highlights their wide diversity and critically evaluates ornithological concepts and theories Incorporating brief biographies of leaders in the field the text describes their contributions in the context of key historical events in bird science Each chapter ends with a summary of the material covered a discussion of potential management and conservation applications and suggested study questions that will stimulate thought and discussion

Pearce-Higgins,Rhys E. Green,2014-06-12 From the red grouse to the Ethiopian bush crow bird populations around the world can provide us with vital insights into the effects of climate change on species and ecosystems They are among the best studied and monitored of organisms yet many are already under threat of extinction as a result of habitat loss overexploitation and pollution Providing a single source of information for students scientists practitioners and policy makers this book begins with a critical review of the existing impacts of climate change on birds including changes in the timing of migration and breeding and effects on bird populations around the world The second part considers how conservationists can assess potential future impacts quantifying how extinction risk is linked to the magnitude of global change and synthesising the evidence in support of likely conservation responses The final chapters assess the threats posed by efforts to reduce the magnitude of climate change
