Inventory of Federal Energy-related Environment and Safety Research for FY 1979, 1980 Inventory of Federal Energy-related Environment and Safety Research for ..., 1980 *Wild Mammals in Captivity* Devra G. Kleiman, Katerina V. Thompson, Charlotte Kirk Baer, 2010-08-15 Zoos, aquaria, and wildlife parks are vital centers of animal conservation and management. For nearly fifteen years, these institutions have relied on *Wild Mammals in Captivity* as the essential reference for their work. Now the book reemerges in a completely updated second edition. *Wild Mammals in Captivity* presents the most current thinking and practice in the care and management of wild mammals in zoos and other institutions. In one comprehensive volume, the editors have gathered the most current information from studies of animal behavior, advances in captive breeding, research in physiology, genetics, and nutrition, and new thinking in animal management and welfare. In this edition, more than three quarters of the text is new, and information from more than seventy-five contributors is thoroughly updated. The standard text for all courses in zoo biology, *Wild Mammals in Captivity* will, in its new incarnation, continue to be used by zoo managers, animal caretakers, researchers, and anyone with an interest in how to manage animals in captive conditions. **USDA Forest Service General Technical Report RM.**, 1976 **Conservation Biology** Fred Van Dyke, Rachel L. Lamb, 2020-07-07 This book provides a thorough up-to-date examination of conservation biology and the many supporting disciplines that comprise conservation science. In this, the Third Edition of the highly successful *Conservation Biology: Foundations, Concepts, Applications*, the authors address their interdisciplinary topic as it must now be practiced and perceived in the modern world. Beginning with a concise review of the history of conservation, the authors go on to explore the interplay of conservation with genetics, demography, habitat, and landscape, aquatic environments, and ecosystem management, and the relationship of all these disciplines to ethics, economics, law, and policy. An entirely new chapter, *The Anthropocene: Conservation in a Human-Dominated Nature*, breaks new ground in its exploration of how conservation can be practiced in anthropogenic biomes, novel ecosystems, and urban habitats. The Third Edition includes the popular *Points of Engagement* discussion questions used in earlier editions and adds a new feature, *Information Boxes*, which briefly recap specific case histories described in the text. A concluding chapter offers insight into how to become a
