COMPUTER NETWORKS The way of interconnecting and communicating people with other people Dr Kranthi Kumar Singamaneni, Mrs Vijaya Saraswathi Redrowthu & Mrs Vasavi Ravuri,2020-08-07 1 1 INTRODUCTION Computer Networks A collection of autonomous computers interconnected by a single technology to facilitate data communication Two computers are said to be interconnected if they are able to exchange information The connection need not be via a copper wire fiber optics microwaves infrared and communication satellites can also be of used The computers are autonomous which are not forcibly started stopped or controlled by other one A system with one control unit and more than one slave is not a computer network Computer network consists of end systems or nodes which are capable of transmitting information and which communicate through a transit system interconnected them The transit system also called as interconnection subsystem or sub network The nodes in the computer network comprise the computer terminals software and peripherals forming an autonomous system capable of performing information processing End system has an interface or interaction through which it is physically connected with subnet The interaction point has an address by which end system is identified Each end system hosts one or more application entities by which the communication takes place between end systems The subnet performs all transmission and switching activities Transmission media connect end system and subnet and carry information **So, We**

Meet Again Michael Reisman,2011-12-01 The characters and circumstances may be different but the outcome is the same It usually ends up with a warm smile and a tender hug Maybe it s a former boyfriend and girlfriend meeting once again after all these years It could be sisters or identical twins separated at birth and reunited due to unexpected events Maybe just a simple or favorite possession we once owned and had lost Then it is discovered some years later Open the pages and smile through this journey as so we meet again Multilevel Security for Relational Databases Osama S. Faragallah,El-Sayed M. El-Rabaie,Fathi E. Abd El-Samie,Ahmed I. Sallam,Hala S. El-Sayed,2014-12-04 Since databases are the primary repositories of information for today s organizations and governments database security has become critically important Introducing the concept of multilevel security in relational databases this book provides a comparative study of the various models that support multilevel security policies in the relational database illustrating the strengths and weaknesses of each model

Multilevel Security for Relational Databases covers multilevel database security concepts along with many other multilevel database security models and techniques. It presents a prototype that readers can implement as a tool for conducting performance evaluations to compare multilevel secure database models. The book supplies a complete view of an encryption based multilevel security database model that integrates multilevel security for the relational database with a system that encrypts each record with an encryption key according to its security class level. This model will help you utilize an encryption system as a second security layer over the multilevel security layer for the database, reduce the multilevel database size and improve the response time of data retrieval from the multilevel database. Considering instance based multilevel database security, the book covers relational database access controls and examines concurrency control in multilevel database security systems. It includes database encryption algorithms, simulation programs, and Visual Studio and Microsoft SQL Server code. *Homomorphic Encryption and Applications* Xun Yi, Russell Paulet, Elisa Bertino, 2014-11-06

This book introduces the fundamental concepts of homomorphic encryption. From these foundations, applications are developed in the fields of private information retrieval, private searching on streaming data, privacy preserving data mining, electronic voting, and cloud computing. The content is presented in an instructional and practical style with concrete examples to enhance the reader's understanding. This volume achieves a balance between the theoretical and the practical components of modern information security. Readers will learn key principles of homomorphic encryption as well as their application in solving real world problems. **Information Security** Dr. M. Saranya, Dr. N. Shanmugapriya, 2024-05-15

Information security is the practice of protecting information by mitigating information risks. It involves the protection of information systems and the information processed, stored, and transmitted by these systems from unauthorized access, use, disclosure, disruption, modification, or destruction. This includes the protection of personal information, financial information, and sensitive or confidential information stored in both digital and physical forms. Effective information security requires a comprehensive and multi-disciplinary approach involving people, processes, and technology. Information Security is not only about securing information from unauthorized access. Information Security is basically the practice of preventing unauthorized access, use, disclosure, disruption, modification, inspection, recording, or destruction of information. Information can be a physical or electronic one. Information can be anything like your details or we can say your profile on social media, your data on your mobile phone, your biometrics, etc. Thus, Information Security spans so many research areas like Cryptography, Mobile Computing, Cyber Forensics, Online Social Media, etc. During the First World War, a Multi-tier Classification System was developed, keeping in mind the sensitivity of the information. With the beginning of the Second World War, formal alignment of the Classification System was done. Alan Turing was the one who successfully decrypted the Enigma Machine, which was used by Germans to encrypt warfare data. Effective information security requires a comprehensive approach that considers all aspects of the information environment, including technology, policies and procedures, and people. It also requires
