Bird Migration A General Survey:

Bird Migration Peter Berthold, 2001 The question of how birds migrate over enormous distances with apparently minimal guidance continues to excite both professional and amateur ornithologists Nearly ten years have elapsed since Peter Berthold a leading researcher in the field wrote the first edition of this highly readable and fascinating book During that time the field has advanced by strides so that this new edition has been extensively revised expanded and updated No other book exists that brings together the vast amount of information that is available on the subject of bird migration so that the book will be an inspiration to birdwatchers naturalists and ornithologists alike

Bird Migration Peter Berthold, 1993 This book written by a leading researcher in the field describes the science of bird migration in an accessible way Not merely detailing the incredible stamina and navigation skills of birds in their seasonal movements Berthold also discusses recent ideas hypotheses experimental results and methods in this fascinating field giving a sense of how we know what we know No other book covers this ground in such a concise text There are twelve chapters including information on types of migration migratory behaviour physiological adaptations orientation mechanisms and navigation and conservation needs of migrants For birdwatchers and naturalists as well as professional ornithologists this book will inspire a new appreciation and understanding of migrating birds

Wings over the Great Plains: Bird Migrations in the Central Flyway Paul Johnsgard, 2012-11-19 The

Central Flyway has been recognized as a collective North South migratory pathway centered on the North American Great Plains for nearly a century but it has never been analyzed as the species that most closely follow it or the major stopping points used by those species on their journeys between their northern breeding and southern wintering grounds. A total of 114 U.S. and 21 Canadian localities of special importance to birds migrating within the Central Flyway are identified and described in detail. Judging from available regional state and local information, nearly 400 species of 50 avian families regularly use the Central Flyway during their migrations. Nearly 90 Central Flyway species have wintering areas partly extending variably far into the Neotropic zoogeographic realm and at least 50 of these winter entirely within the Neotropic realm. A few of these species undertake some of the longest known migrations of all birds, in excess of 8,000 miles in each direction. Seven maps, 49 figures, and over 100 literature citations are included.

Migration : The Biology of Life on the Move Davis Hugh Dingle, Professor in the Department of Entomology and Center for Population Biology, University of California, 1996-01-18

Migration is one of the most fascinating and dramatic of all animal behaviors. Historically, however, the study of migration has been fragmented, with ornithologists, entomologists, and marine biologists paying little attention to work outside their own fields. This treatment of the subject shows how comparisons across taxa can, in fact, illuminate migratory life cycles and the relation of migration to other movements. The book thus takes an integrated ecological perspective, focusing on migration as a biological phenomenon. The work is divided into four parts, each with a brief introductory section. Part I defines migration, gives examples, and places migration in the spectrum of movement behaviors, concluding with a chapter on methods for its study. Part II focuses on proximate mechanisms, including physiology and morphology, and the constraints associated with them, the interactions between migration and wind and current patterns, and the various orientation and navigation mechanisms by which migrants find their way about. Part III, on the evolution of migratory life histories, addresses the evolutionary and ecological basis for migration and the roles of migration not only in the lives of organisms but also in the ecological communities in which they live. Part IV is devoted to a brief consideration of migration and its relation to pest management and conservation. As a major contribution to a vital subject, this work will be valued by all researchers and students in the field of animal behavior, ecology, and zoology.

Avian Migration Peter Berthold, Eberhard Gwinner, Edith Sonnenschein, 2013-03-09

P. Berthold and E. Gwinner: Bird migration is an intriguing aspect of the living world, so much so that it has been investigated for as long and as thoroughly as almost any other natural phenomenon. Aristotle, who can count as the founder of scientific ornithology, paid very close attention to the migrations of the birds he observed, but it was not until the reign of Friedrich II in the first half of the 13th century that reliable data began to be obtained. From then on, the data base grew rapidly. Systematic studies of bird migration were introduced when the

Vogelwarte Rossitten was founded as the first ornithological biological observation station in the world see first chapter In Memory of Vogelwarte Rossitten This area later received enormous impetus when experimental research on the subject was begun the large scale bird ringing experiment initiated in Rossitten in 1903 by Johannes Thienemann who was inspired by the pioneering studies of C C M Mortensen the experiments on photoperiodicity carried out by William Rowan in the 1920s in Canada and retention and release experiments performed by Thienemann in the 1930s in Rossitten the first experimental study on the orientation of migratory birds After the Second World War migration research while continuing in the previous areas also expanded into new directions such as radar ornithology ecophysiology and hormonal control mechanisms studies of evolution genetics telemetry and others

Passerine Migration Nikita Chernetsov, 2012-04-18 Most birds cannot cover the distance between their breeding and winter quarters in one hop They have to make multiple flights alternated with stopovers Which factors govern the birds decisions to stop to stop for how long when to resume flight What is better to accumulate much fuel and to make long flights for many hundreds of kilometres or to travel in small steps Is it necessary to find habitats similar to the breeding ones or other habitats would do Are long migratory flights indeed so costly energetically as usually assumed This monograph summarizes our current knowledge on the ecology of songbird migrants during migratory stopovers and on their behaviour

Conservation of Shared Environments Laura Lopez-Hoffman, 2009 The United States and Mexico's shared environment extends far beyond the political line For instance it comprises the plant and animal species whose natural distributions extend deep into each nation along with the waters in rivers and aquifers that support ecosystem function far removed from the border Conservation of Shared Environments presents a broad perspective on the ecological social and political challenges of conserving biodiversity across the U S Mexico border Covering topics as diverse as wildlife and grassland preservation water rights ecosystem services indigenous peoples and the ecological consequences of border security the contributors illustrate collaborative transboundary efforts to overcome cross border conservation challenges This volume offers scientific analysis as well as insight for bridging gaps between researchers policymakers and the public For more information on this and other volumes in the series visit The Edge Web site
