Dawe, Ian McTaggart-Cowan, John M. Cooper, Gary W. Kaiser, Michael C.E. McNall, 2011-11-01 This much awaited final volume of The Birds of British Columbia completes what some have called one of the most important regional ornithological works in North America It is the culmination of more than 25 years of effort by the authors who with the assistance of thousands of

dedicated volunteers throughout the province have created the basic reference work on the avifauna of British Columbia. Volume 4 covers the last half of the passerines and describes 102 species including the warblers, sparrows, grosbeaks, blackbirds and finches. The text builds upon the authoritative format of the previous volumes and is supported by hundreds of full colour illustrations including detailed distribution maps, unique habitat shots and beautiful photographs of the birds, their nests, eggs and young. In addition, a species update lists and describes 27 species of birds new to the province since the first three volumes were published. The book concludes with *Synopsis: The Birds of British Columbia into the 21st Century* which synthesizes data and information from all four volumes and looks at the conservation challenges facing birds in the new millennium. The four volumes in *The Birds of British Columbia* provide unprecedented coverage of the region's birds, presenting a wealth of information on the ornithological history, regional environment, habitat, breeding habits, migratory movements, seasonality and distribution patterns of 472 species of birds. It is the complete reference work for birdwatchers, ornithologists and naturalists.

Urban Wildlife Habitats Lowell W. Adams, 1994. *Urban Wildlife Habitats* was first published in 1994. Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions. In cities, towns and villages between buildings and parking lots, streets and sidewalks and polluted streams and rivers, there is ever less space for the natural plants and animals that once were at home across North America. In this first book-length study of the subject, Lowell W. Adams reviews the impact of urban and suburban growth on natural plant and animal communities and reveals how, with appropriate landscape planning and urban development, cities and towns can be made more accommodating for a wide diversity of species, including our own. Soils and ground surface, air, water and noise pollution, space and demographics are among the urban characteristics Adams considers in relation to wildlife. He describes changes in the composition and structure of vegetation as native species are replaced by exotic ones and shows how, with spreading urbanization, of natural habitats the diversity of species of plants and animals almost always declines, although the density of a few species increases. Adams contends, however, that it is possible for a wide variety of species to coexist in the metropolitan environment and he cites a growing interest in the practice of natural landscaping which emphasizes the use of native species and considers the structure, pattern and species composition of vegetation as it relates to wildlife needs. Urban habitats vary from small city parks in densely built downtowns to suburbs with large yards and considerable open space. Adams discusses the opportunities these areas, along with school yards, hospital grounds, cemeteries, individual residences and vacant lots, provide for judicious wildlife management and for the salutary interaction of people with nature. Lowell W. Adams is vice president of the National Institute for Urban Wildlife in Columbia, Maryland.
