Edridge, 2012-06 A new and inspiring view of creation and the Flood After the Beginning offers compelling insight

about God's purpose for an eternal loving relationship with mankind that was made in His image. This theme is revealed in Genesis with the creation of Adam and Eve with the animals named by Adam and with the animals that were saved on the ark. From creation through the Flood, Dr. Edridge concludes that the creatures described in Genesis had emotional capability such as mammals and birds. Further consideration of species that should be included in the creation narrative leads to agreement between the biblical sequence of creation and the scientific chronology of the fossil record and the early stages of the Earth's development. Dr. Edridge examines different flood models to determine if they are consistent with biblical parameters and scientific scrutiny. Based on documented flood records and geological events, he proposes a new catastrophic Flood Model that meets both qualitative and quantitative requirements for the most likely flooded area, the cradle of civilization. This model is unique, providing a viable mechanism that caused the Flood to subside but which agrees with the biblical description.

The Geochemical Origin of Microbes William F. Martin, Karl Kleinermanns, 2024-06-27 This is a textbook covering the transition from energy-releasing reactions on the early Earth to energy-releasing reactions that fueled growth in the first microbial cells. It is for teachers and college students with an interest in microbiology, geosciences, biochemistry, evolution, or all of the above. The scope of the book is a quantum departure from existing origin-of-life books in that it starts with basic chemistry and links energy-releasing geochemical processes to the reactions of microbial metabolism. The text reaches across disciplines, providing students of the geosciences an origins biology interface and bringing a geochemistry origins interface to students of microbiology and evolution. Beginning with physical chemistry and transitioning across metabolic networks into microbiology, the timeline documents chemical events and organizational states in hydrothermal vents, the only environments known that bridge the gap between spontaneous chemical reactions that we can still observe in nature today and the physiology of microbes that live from  $H_2$ ,  $CO_2$ , ammonia, phosphorus, inorganic salts, and water. Life is a chemical reaction. What it is and how it arose are two sides of the same coin. Key Features: Provides clear connections between geochemical reactions and microbial metabolism; Focuses on chemical mechanisms and transition metals; Richly illustrated with color figures explaining reactions and processes; Covers the origin of the Earth, the origin of metabolism, the origin of protein synthesis, and genetic information, as well as the escape into the wild of the first free-living cells, Bacteria, and Archaea.

Existence, Origin And Weird Technology: Exploring Humanity's Ultimate Questions Pentti O. Haikonen, 2022-10-21 What are we, humans, and how did we become the high technology species? What would be our legacy? What is the ultimate meaning of life? Many of these questions are still waiting for full and complete answers and explanations. For thousands of years, humans have pondered the fundamental questions about origin, existence, and reality, and also about mind, consciousness, communication, and social issues. In this day and age, when advancing technology is quickly transforming our societies and our ways of life, these questions are more important than ever, not only in the theoretical sense but also in practice. We have to understand what has happened and what is happening. For the first time in the history, technology has given us powerful

means to investigate the phenomena behind the ultimate questions However technology is only a tool the thinking human is still required for the understanding of the world This book explores these curious topics beginning from the origin of the Universe to the emergence of life the evolution from cells to brains the development of cognitive ability from perception and attention to reasoning and thinking how we interact with other humans by means of love and emotion to the creation of thinking machines by weird technology THIS BOOK presents novel views on these questions and provides explanations and possible answers in an easy to read style

STARTING BEFORE ZERO** PSJ (Peet) Schutte,2013-07-12 I explain Genesis 1 v 1 the beginning or birth of the Universe in terms of the Bible using not theology but mathematics I prove Genesis 1 verse 1 to be correct by using mathematics The Bible says IN THE BEGINNING OF CREATION 1 when God made heaven and earth 2 the earth was without form and void 3 with darkness over the face of the abyss Yes this I do explain mathematically and I manage this because I prove and explain four cosmic keys that build the Universe namely The Titius Bode Law The Lagrangian Points The Roche limit and Coanda Effect Everything in nature in the Universe applies these phenomena in how space forms The Titius Bode Law The Lagrangian Points The Roche Coanda Effect forms the Universe in as much as forming stars in spheres and forming galactica in circles These principles form space and materials This is a process that produces space and that is how the Universe began before the Universe began in space I take the cosmic birth back to before space came about as the Big Bang     **Essays on the Frontiers of Modern Astrophysics and Cosmology** Santhosh Mathew,2013-11-08 This book is a collection of fourteen essays that describe an inspiring journey through the universe and discusses popular science topics that modern physics and cosmology are struggling to deal with What is our place in the universe and what happens in the magnificent cosmos where we exist for a brief amount of time In an unique way that incorporates mythological and philosophical perspectives the essays in this work address the big questions of what the universe is how it came into being and where it may be heading This exciting adventure is a rich scientific history of elegant physics mathematics and cosmology as well as a philosophical and spiritual pursuit fueled by the human imagination     **The Mystery of Existence** John Leslie,Robert Lawrence Kuhn,2013-04-22 This compelling study of the origins of all that exists including explanations of the entire material world traces the responses of philosophers and scientists to the most elemental and haunting question of all why is anything here or anything anywhere Why is there something rather than nothing Why not nothing It includes the thoughts of dozens of luminaries from Plato and Aristotle to Aquinas and Leibniz to modern thinkers such as physicists Stephen Hawking and Steven Weinberg philosophers Robert Nozick and Derek Parfit philosophers of religion Alvin Plantinga and Richard Swinburne and the Dalai Lama The first accessible volume to cover a wide range of possible reasons for the existence of all reality from over 50 renowned thinkers including Plato Aristotle Aquinas Descartes Leibniz Hume Bertrand Russell Stephen Hawking Steven Weinberg Robert Nozick Derek Parfit Alvin Plantinga Richard Swinburne John Polkinghorne Paul Davies and the Dalai Lama Features insights by scientists philosophers and theologians Includes informative and helpful editorial introductions to each section Provides a wealth of suggestions for further reading and research Presents material that is both comprehensive and comprehensible     **Black Holes, Wormholes and Time Machines** Jim Al-Khalili,2002-01-01 Do you know What might happen if you fall into a black hole That the Universe does not have an edge That the reason it gets dark at night is proof of the Big Bang That cosmic particles time travel through the atmosphere defying death That our past present and future might all coexist out

there With two remarkable ideas Albert Einstein revolutionized our view of the Universe His first was that nothing can travel faster than light the ultimate speed limit This simple fact leads to the unavoidable conclusion that space and time must be linked together forever as Spacetime With his second monumental insight Einstein showed how Spacetime is warped and stretched by the gravity of all objects in the Universe and even punctured by black holes But such possible twisting of Spacetime allowed a magic not even Einstein could have imagined time travel Theoretical physicist Jim Al Khalili finally lays science fiction to rest as he opens up Einstein's Universe Leading us gently and light heartedly through the dizzying world of our space and time he even gives us the recipe for a time machine capable of taking us Back to the Future to Alice's Wonderland or on a trip with the Terminator
