Forensic Media Greg Siegel considers how photographic electronic and digital media have been used to record and reconstruct accidents particularly high speed crashes and catastrophes Focusing in turn on the birth of the field of forensic engineering Charles Babbage's invention of a self registering apparatus for railroad trains flight data and cockpit voice recorders black boxes the science of automobile crash testing and various accident reconstruction techniques and technologies Siegel shows how forensic media work to transmute disruptive chance occurrences into reassuring narratives of causal succession Through historical and philosophical analyses he demonstrates that forensic media are as much technologies of cultural imagination as they are instruments of scientific inscription as imbued with ideological fantasies as they are compelled by institutional rationales By rethinking the historical links and cultural relays between accidents and forensics Siegel sheds new light on the corresponding connections between media technology and modernity *Air*

Two parallel investigations take place after every aviation accident one technical one judicial The former must be conducted with the sole intention of making safety recommendations to prevent the recurrence of similar accidents The judicial investigation however has the intention of identifying those parties that have been at fault and to apportion blameworthiness for criminal and civil liability Consequently this results in a predicament for those parties that have been identified as having

played a role in the accident a dilemma between not supplying information aimed at enhancing safety and preventing future accidents and on the other hand supplying such information which may possibly be used against them in subsequent criminal prosecution The situation is compounded by inconsistent approaches between different legal systems aviation professionals may find themselves faced with criminal charges in one country but not in another and they may also be unsure as to whether statements given during the technical investigation could be used against them in a court of law Aviation safety is to a large extent built upon the trust placed by pilots ATCOs and other aviation professionals in the process of accident investigation This book examines the growing trend to criminalize these same people following an accident investigation and considers the implications this has for aviation safety
