Allocating Scarce Medical Resources:

Allocating Scarce Medical Resources H. Tristram Engelhardt Jr., Mark J. Cherry, 2002-05-20 Roman Catholic moral theology is the point of departure for this multifaceted exploration of the challenge of allocating scarce medical resources. The volume begins its exploration of discerning moral limits to modern high technology medicine with a consensus statement born of the conversations among its contributors. The seventeen essays use the example of critical care because it offers one of the few areas in medicine where there are good clinical predictive measures regarding the likelihood of survival. As a result, the health care industry can with increasing accuracy predict the probability of saving lives and at what cost. Because critical care involves hard choices in the face of finitude, it invites profound questions about the meaning of life, the nature of a good death, and distributive justice. For those who identify the prize of human life as immortality, the question arises as to how much effort should be invested in marginally postponing death. In a secular culture that presumes that individuals live only once and briefly, there is an often unacknowledged moral imperative to employ any means necessary to postpone death. The conflict between the free choice of individuals and various aspirations to equality compounds the challenge of controlling medical costs while also offering high tech care to those who want its possible benefits. It forces society to confront anew notions of ordinary versus extraordinary and proportionate versus disproportionate treatment in a highly technologically structured social context. This cluster of discussions is enriched by five essays from Jewish, Orthodox, Christian, and Protestant perspectives. Written by premier scholars from the United States and abroad, these essays will be valuable reading for students and scholars of bioethics and Christian moral theology.

Allocating Health Care Resources

James M. Humber, Robert F. Almeder, 1995-01-11 In *ALLOCATING HEALTH CARE RESOURCES*, leading authorities and researchers expose the basic philosophical, ethical, and economic issues underlying the current health care debate. The contributors wrestle with such complicated issues as whether it is ethical to ration health care, the morality of the worldwide bias against children in allocating health care resources, whether sin taxes can be defended morally, and how to achieve a just health care system. The book also includes an insightful analysis of the Clinton health care reform plan. *ALLOCATING HEALTH CARE RESOURCES* will be of interest to philosophers, health policy experts, medical ethicists, health professionals, and concerned citizens. It serves to clarify and illuminate the logic and rhetoric of health care reform and so to help us all achieve a fair and equitable distribution of these precious resources.

The Covid-19 Pandemic and Global Bioethics

Henk ten Have, 2022-05-16 This book demonstrates that the COVID-19 pandemic asks for a global approach to bioethics; it describes how the pandemic affects the experience of being in a world that is intrinsically characterized by global connectivity. It demonstrates that a moral vision is necessary to articulate this experience of connectedness. Subsequently, a perspective of global bioethics is introduced, which provides a broader framework than mainstream bioethics since it highlights the significance of both vulnerability and solidarity. Through a unique global perspective, the book addresses the moral challenges

of the pandemic and places the confrontation with death disease and disability within a wider framework of ethical concerns This book is of important in the public debate on infectious diseases and of relevance to health professionals global health educators public health experts as well as policy makers

Interdisciplinary Perspectives on Fairness, Equity, and Justice Meng Li,David P. Tracer,2017-09-18 This volume brings together cutting edge research from emerging and senior scholars alike representing a variety of disciplines that bears on human preferences for fairness equity and justice Despite predictions derived from evolutionary and economic theories that individuals will behave in the service of maximizing their own utility and survival humans not only behave cooperatively but in many instances truly altruistically giving to unrelated others at a cost to themselves Humans also seem preoccupied like no other species with issues of fairness equity and justice But what exactly is fair and how are norms of fairness maintained How should we decide and how do we decide between equity and efficiency How does the idea of fairness translate across cultures What is the relationship between human evolution and the development of morality The collected chapters shed light on these questions and more to advance our understanding of these uniquely human concerns Structured on an increasing scale this volume begins by exploring issues of fairness equity and justice in a micro scale such as the neural basis of fairness and then progresses by considering these issues in individual family and finally cultural and societal arenas Importantly contributors are drawn from fields as diverse as anthropology neuroscience behavioral economics bioethics and psychology Thus the chapters provide added value and insights when read collectively with the ultimate goal of enhancing the distinct disciplines as they investigate similar research questions about prosociality In addition particular attention is given to experimental research approaches and policy implications for some of society s most pressing issues such as allocation of scarce medical resources and moral development of children Thought provoking and informative *Interdisciplinary Perspectives on Fairness Equity and Justice* is a valuable read for public policy makers anthropologists ethicists psychologists neuroscientists and all those interested in these questions about the essence of human nature

Precautionary Reasoning in Environmental and Public Health Policy David B.

Resnik, 2021-03-27 This book fills a gap in the literature on the Precautionary Principle by placing the principle within the wider context of precautionary reasoning and uses philosophical arguments and case studies to demonstrate when it does and does not apply The book invites the reader to take a step back from the controversy surrounding the Precautionary Principle and consider the overarching rationales for responding to threats to the environment or public health It provides practical guidance and probing insight for the intended audience including scholars students journalists and policymakers

The Economics of Resource Allocation in Health Care Andrea Klonschinski, 2016-03-31 The question of how to allocate scarce medical resources has become an important public policy issue in recent decades Cost utility analysis is the most commonly used method for determining the allocation of these resources but this book counters the argument that overcoming its inherent imbalances is simply a question of implementing methodological changes The Economics of Resource Allocation in Health Care represents the first comprehensive analysis of equity weighting in health care resource allocation that offers a fundamental critique of its basic framework It offers a critique of health economics putting the discourse on economic evaluation into its broader socio political context Such an approach broadens the debate on fairness in health economics and ties it in with deeper rooted problems in moral philosophy Ultimately this interdisciplinary study calls for the adoption of a fundamentally different paradigm to address the distribution of scarce medical resources This book will be of interest to policy makers health care professionals and post graduate students looking to broaden their understanding of the

economics of the health care system

Narrative Theology and Moral Theology Alexander Lucie-Smith, 2016-04-15 Moral thinking today finds itself stranded between the particular and the universal Alasdair MacIntyre's work on narrative discussed here along with that of Stanley Hauerwas and H T Engelhardt aims to undo the perceived damage done by the Enlightenment by returning to narrative and abandoning the illusion of a disembodied reason that claims to be able to give a coherent explanation for everything It is precisely this a theory that holds good for all cases that John Rawls proposed drawing on the heritage of Emmanuel Kant Who is right Must universality be abandoned Must we only think about morality in terms that are relative bound by space and time Alexander Lucie Smith attempts to answer these questions by examining the nature of narrative itself as well as the particular narratives of Rawls and St Augustine Bound and rooted as they are in history and personal experience narratives nevertheless strain at the limits imposed on them It is Lucie Smith's contention that each narrative that points to a lived morality exists against the background of an infinite horizon and thus it is that the particular and the rooted can also make us aware of the universal and unchanging

Britain, Poland and the Eastern Front, 1939 Anita J. Prazmowska, 1987-07-23 This book offers a revisionist interpretation of British foreign policy towards Poland and the role of the Anglo Polish relationship during the period March September 1939 It challenges and questions hitherto held views on the British determination to defend Poland and oppose German expansion eastwards It includes a study of foreign policy economic policy and military planning This book is a major contribution to our knowledge of the outbreak of the war because it contains a unique and original study of the role of the Poles in British proposals for an eastern front and the Polish perception of their relationship with Germany Finally the inconclusive nature of British approaches to the Soviet Union and the Rumanian government are put into the context of the abortive proposal for an eastern front against Germany
