Economic Planning And Restructuring K P Yadav,2006 I have also tried to highlight the constructive roles played by Russia during and after the Second World War in East Europe In the socialist block of countries there were efforts to address the peoples basic needs like food shelter education and health But they seriously lagged in catering to other consumer goods and luxury items for which the people had great craving The closed door functioning of the communist parties in East Europe as per the dictates of Soviet Russia had alienated the parties from the people During spring and summer I travelled to the extreme Western Europe London and Paris and the central east Europe comprising Italy Austria Czechoslovakia Germany and

Hungary I had rich experience of travelling by train car as well as by hitchhiking During my entire stay I met many colourful jovial and compassionate personalities in different fields and had entered into very lively discussions about man woman relationships including love sex marriage and divorce women s position in the east and west definition of character and virtuousness religion and other socio political developments The cultural and social differences between Europe and India also featured An attempt has also been made to look into the causes of the recent disintegration of Yugoslavia in the early nineties of the last century

Changing Spatial Elements in Chinese Socio-economic Five-year Plan: from Project Layout to Spatial Planning Lei Wang,2018-08-01 As a legacy of the socialist state with central planning Five Year Planning FYP is very important in regulating socio economic and spatial development even in post reform China This book tries to fill the research gap between examining the role of FYP and how spatial elements in the FYP mechanism have operated and transformed in spatial regulatory practices in transitional China By building a conceptual framework and studying two empirical cases at different spatial scales with the help of both qualitative and quantitative methods it helps to understand various stakeholders institutions and planning administrations mechanisms of articulating spatial planning into the FYP system and the effectiveness of spatial planning in solving place specific governance issues in urban and regional China

Finding a Path for China's Rise Philippe Lionnet,2023-01-02 The rise of China is ever present in debates on globalisation and ongoing power shifts In a time of rising international tensions understanding the interdependencies between China s course and the world economy is ever more important Often the economic reforms under Deng Xiaoping after 1978 are emphasised They initiated dramatic changes in China s economy and contributed to its ascent as a world power In contrast less attention has been given to the context in which these reforms were implemented Philippe Lionnet analyses important adjustments in China s agricultural industrial and foreign trade policies in the course of the 1970s as well as their origins He shows how policy experiments and their limits shaped the path of the socialist state

Comparative Economic Systems A. Zimbalist,2012-12-06 3 edge methods and theory I turn now to some of my own reflections on this score Some Reflections My first proposition is that if we are interested in analyzing the performance and dynamic properties of the world s economies it is only at significant peril that comparative economists can overlook noneconomic or political factors This is not to say that it is illegitimate to abstract from non economic factors for particular purposes rather such abstraction should occur only with cogni zance of the influences being suppressed I have

argued elsewhere that the analytical compromise in suppressing noneconomic variables is greater for the study of planned than for market economies 7 Borrowing from Polanyi 8 it is claimed that in market systems the economic sphere is disembedded from separate and not subordinate to the political social and cultural spheres while in planned systems the economic sphere is embedded in the noneconomic spheres To be sure market economies are strongly affected by political and cultural factors but planned economies have and often exercise the potential to let political goals dominate in making production allocational or distributional choices Indeed it is difficult in practice to separate out what are political and what are economic decisions in planned systems

The Programming Approach and the Demise of Economics Franco Archibugi, 2019-11-21 This trilogy deals with an epistemology of economics arguing for a radical overturning of conventional analysis and providing an alternative to political economy and social sciences based not on positivism but on a normative and programming paradigm Volume III furthers and concludes work presented in Volume I and Volume II and introduces a concrete and practical example of how to build a Planning Accounting Framework PAF as associated with Frisch's plan frame explored in Volume II to demonstrate the extent to which decisions and negotiations can be routed in the social sciences The PAF is an instrument of the programming approach that can be used to verify the compatibility of decisions and their effects The author builds on Frisch's classical PAF to maximise the phenomenology of economic systems and assure a consistent and effective implementation of decision

making A Study of Alternatives to the Davis (West Virginia) Pumped Storage Project, 1980 National Economic Planning Don Lavoie, 1985-06-01 Don Lavoie argues that the radical Left's enthusiasm for planning has been a tragic mistake and that progressive social change requires the abandonment of this traditional view Lavoie argues that planning whether Marxism economic democracy or industrial policy can only disrupt social and economic coordination He challenges both radicals and their critics to begin reformulating our whole notion of progressive economic change without reliance on central planning National Economic Planning What is Left will challenge thinkers and policymakers of every political persuasion

Politics and Method (Routledge Revivals) Doreen Massey, Richard Meegan, 2015-04-10 This book first published in 1985 explores the connections in academic research between theoretical positions political perspectives and policy prescriptions Five different groups of authors who have written broadly in the fields of industrial and social geography discuss this relationship and illustrate it with recent work Around their contributions the editors have constructed a book that is both a guide to the research debate for students at all levels and a handbook with notes and questions for those about to undertake their own research projects Though designed primarily for use on undergraduate geography urban studies and applied economics courses its broad debate on research method is important for all professional and postgraduate researchers in the social sciences
