Almost Heaven Women On The Frontiers Of Space:

Almost Heaven Bettyann Kevles, 2003 *Almost Heaven* Bettyann Holtzmann Kevles, 2003-10-06 When we first blasted our way into space a generation ago we did so with men from each of the superpowers Women were excluded from one of the most exciting adventures of the century and not because they weren't up to the challenge In 1962 three accomplished female pilots took their case before the U S Congress but they were dismissed as unpatriotic We were in a Cold War a space race and NASA had already chosen the Mercury Seven to represent America In *Almost Heaven* acclaimed writer Bettyann Kevles gives voice to the women of the space age women who had the right stuff but had to struggle to prove it Through intensive interviews and meticulous research Kevles illuminates what makes these women tick What were their unique concerns as female astronauts Were they truly accepted into the astronaut corps or were they merely tokens She also poses a question that will affect generations to come Is NASA preparing women as well as men for travel beyond Earth's orbit or is the research still biased toward men The stories of these forty women told here for the first time in rich and colorful detail explore the convergence of culture and science and suggest the battle is far from over [Integrating Women into the Astronaut Corps](#) Amy E. Foster, 2011-12-01 Why Amy E Foster asks did it take two decades after the Soviet Union launched its first female cosmonaut for the United States to send its first female astronaut into space In answering this question Foster recounts the complicated history of integrating women into NASA's astronaut corps NASA selected its first six female astronauts in 1978 Foster examines the political technological and cultural challenges that the agency had to overcome to usher in this new era in spaceflight She shows how NASA had long developed progressive hiring policies but was limited in executing them by a national agenda to beat the Soviets to the moon budget constraints and cultural ideas about women's roles in America Lively writing and compelling stories including personal interviews with America's first women astronauts propel Foster's account Through extensive archival research Foster also examines NASA's directives about sexual discrimination the technological issues in integrating women into the corps and the popular media's discussion of women in space Foster puts together a truly original study of the experiences not only of early women astronauts but also of the managers and engineers who helped launch them into space In documenting these events Foster offers a broader understanding of the difficulties in sexually integrating any workplace even when the organization approaches the situation with as positive an outlook and as strong a motivation as did NASA **Women Space Pioneers** Carole S. Briggs, 2005-01-01 Looks at the efforts and accomplishments of some of the first women in space including Jerrie Cobb Mae Jemison Sally K Ride Valentina Tereshkova and Eileen Collins **Women in Space** Karen Bush Gibson, 2014-02-01 When Valentina Tereshkova blasted off aboard Vostok 6 on June 16 1963 she became the first woman to rocket into space It would be 19 years before another woman got a chance cosmonaut Svetlana Savitskaya in 1982 followed by American astronaut Sally Ride a year later By breaking the stratospheric ceiling these women forged a path for many female astronauts

cosmonauts and mission specialists to follow Women in Space profiles 23 pioneers including Eileen Collins the first woman to command the space shuttle Peggy Whitson who logged more than a year in orbit aboard the International Space Station and Mae Jemison the first African American woman in space as well as astronauts from Japan Canada Italy South Korea France and more Readers will also learn about the Mercury 13 American women selected by NASA in the late 1950s to train for spaceflight Though they matched and sometimes surpassed their male counterparts in performance they were ultimately denied the opportunity to head out to the launching pad Their story and the stories of the pilots physicists and doctors who followed them demonstrate the vital role women have played in the quest for scientific understanding *Women in Space - Following Valentina* Shayler David, Ian A. Moule, 2006-08-29 Space exploration has developed from early unmanned space probes through the pioneering years of the Manned Mercury Gemini and Apollo missions to missions that now include women in the crew as a matter of course Dave Shayler tells the story of the first woman balloonist in 1784 to their breakthrough as astronauts and cosmonauts in a range of professional roles He covers the contribution women have made to space exploration and draws on interviews with Shuttle and Mir crew members who were women These interviews detail the achievements of the first female Shuttle commander and the first female resident crew member of the International Space Station These and many other events are presented in a detailed and highly readable account that recalls the difficult path to space exploration by women *Women Spacefarers* Umberto Cavallaro, 2017-03-02 This book tells the fascinating stories of the valiant women who broke down barriers to join the space program Beginning with the orbital flight of USSR cosmonaut Valentina Tereshkova in 1963 they became players in the greatest adventure of our time The author contextualizes their accomplishments in light of the political and cultural climate from the Cold War in the background to the changing status of women in society at large during the Seventies The book includes the biographies of and in some cases interviews with the sixty women who flew in space in the first half century of space history It reports their achievements and some little known details The result is a gallery of pioneering women who reached for the stars women who with exceptional skill hard work and dedication reached impressive careers as accomplished pilots researchers and engineers many are now in high level managerial positions both at NASA or in public and private organizations and all left a legacy of strength **Original Sin** Bleddyn E. Bowen, 2023-01-01 Space technology was developed to enhance the killing power of the state The Moon landings and the launch of the Space Shuttle were mere sideshows drawing public attention away from the real goal military and economic control of space as a source of power on Earth Today as Bleddyn E Bowen vividly recounts thousands of satellites work silently in the background to provide essential military intelligence and economic capabilities No major power can do without them Beyond Washington Moscow and Beijing truly global technologies have evolved from the ground floor of the nuclear missile revolution to today's orbital battlefield shaping the wars to come World powers including India Japan and Europe are fully realizing the strategic benefits of commanding Earth's cosmic coastline as a stage for war development and

prestige Yet as new contenders spend more and more on outer space there is scope for cautious optimism about the future of the Space Age if we can recognize rather than hide its original sin **Dark Star** Matthew H. Hersch, 2023-12-26 A captivating history of NASA's Space Transportation System the space shuttle chronicling the inevitable failures of a doomed design In **Dark Star** Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years NASA's space shuttle He begins with the origins of the space shuttle a century long effort to develop a low cost reusable rocket powered airplane to militarize and commercialize space travel which Hersch explains was built the wrong way at the wrong time and for all the wrong reasons Describing the unique circumstances that led to the space shuttle's creation by President Richard Nixon's administration in 1972 and its subsequent flights from 1981 through 2011 Hersch illustrates how the space shuttle was doomed from the start While most historians have accepted the view that the space shuttle's fatal accidents including the 1986 Challenger explosion resulted from deficiencies in NASA's management culture that lulled engineers into a false confidence in the craft **Dark Star** reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became available to eliminate its obvious flaws Hersch's work seeks to answer the perilous questions of technological choice that confront every generation and it is a critical read for anyone interested in how we can create a better world through the things we build *Capital and the Cosmos* Peter Dickens, 2023-01-01 This book offers a new understanding of society's relations with the cosmos Entrepreneurs such as Jeff Bezos and Elon Musk receive a great deal of publicity but offer unlikely and implausible visions of space tourism for the general public Meanwhile asteroids are seen as rare materials which will be extracted and used to produce untold riches for earthbound citizens The reality is rather different First there is no evidence that owners of capital are attempting to extract rare materials in the cosmos The costs would be out of this world But capital not governments is determining how outer space should be used Capital's investments in aerospace companies are actively determining forms of military interventions and the equipment used And satellite television pumps out forms of culture aimed at a global audience But these are being ignored and subverted by for example indigenous peoples In short this book sets out a new understanding of our relations with the cosmos The forces of capital are certainly powerful but at the same time they are being challenged subverted and even overturned **The Race for Space** Betsy Kuhn, 2007-01-01 The history of space flight for the Americans and the Russians **Critical issues in the history of spaceflight** Steven J. Dick, 2018 **Critical Issues in the History of Spaceflight** Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by

President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experience **Amazon To The Stars** Umberto

Cavallaro,2023-05-23 This book is the second edition of Women Spacefarers and tells the fascinating stories of the valiant women who broke down barriers to join the space program Beginning with the orbital flight of USSR cosmonaut Valentina Tereshkova in 1963 and continuing to the present day it covers the many female players who have had a central role in the greatest adventure of our time The book includes the biographies of and in some cases interviews with the brave women who have flown in space For each entry the author contextualizes the spacefarer's accomplishments in light of the political and cultural climate of the time The second edition features fifteen additional profiles on figures such as Jessica Meir and Wally Funk new interview material a new thematic structure based on each woman's science specialty and role an expanded glossary and more The result is a gallery of pioneering women who reached for the stars women who with exceptional skill hard work and dedication reached impressive careers as accomplished pilots researchers engineers and managers and left a legacy of strength for all aspiring spacefarers **Astronauts** Jim Ottaviani,2020-02-04 In the graphic novel Astronauts

Women on the Final Frontier Jim Ottaviani and illustrator Maris Wicks capture the great humor and incredible drive of Mary Cleave Valentina Tereshkova and the first women in space The U S may have put the first man on the moon but it was the Soviet space program that made Valentina Tereshkova the first woman in space It took years to catch up but soon NASA's first female astronauts were racing past milestones of their own The trail blazing women of Group 9 NASA's first mixed gender class had the challenging task of convincing the powers that be that a woman's place is in space but they discovered that NASA had plenty to learn about how to make space travel possible for everyone **Bad Girls Throughout History**
