Alternative Sources Of Energy:

Integration of Alternative Sources of Energy Felix A. Farret, M. Godoy Simoes, 2006-04-20 A unique electrical engineering approach to alternative sources of energy Unlike other books that deal with alternative sources of energy from a mechanical point of view *Integration of Alternative Sources of Energy* takes an electrical engineering perspective Moreover the authors examine the full spectrum of alternative and renewable energy with the goal of developing viable methods of integrating energy sources and storage efficiently Readers become thoroughly conversant with the principles possibilities and limits of alternative and renewable energy The book begins with a general introduction and then reviews principles of thermodynamics Next the authors explore both common and up and coming alternative energy sources including hydro wind solar photovoltaic thermosolar fuel cells and biomass Following that are discussions of microturbines and induction generators as well as a special chapter dedicated to energy storage systems After setting forth the fundamentals the authors focus on how to integrate the various energy sources for electrical power production Discussions related to system operation maintenance and management as well as standards for interconnection are also set forth Throughout the book diagrams are provided to demonstrate the electrical operation of all the systems that are presented In addition extensive use of examples helps readers better grasp how integration of alternative energy sources can be accomplished The final chapter gives readers the opportunity to learn about the HOMER Micropower Optimization Model This computer model developed by the National Renewable Energy Laboratory NREL assists in the design of micropower systems and facilitates comparisons of power generation techniques Readers can download the software from the NREL Web site This book is a must read for engineers consultants regulators and environmentalists involved in energy production and delivery helping them evaluate alternative energy sources and integrate them into an efficient energy delivery system It is also a superior textbook for upper level undergraduates and graduate students *Alternative Sources of Energy Modeling and Automation* George S. Stavrakakis, 2020-03-06 Micro power domestic organic Rankine cycle ORC systems and the selection of the expander and the working fluid are presented analyzed thoroughly and numerically evaluated A promising decentralized hybrid PV SOFC system is investigated for providing useful energy supply to commercial buildings capable of power and heat generation at a lower cost A hybrid solar combined cycle power plant integrated with a packed bed thermal energy storage system with a novel recycling configuration enables robust control of collector temperature and net power during times of high solar activity An automated hybrid solar and biomass power plant for thermal energy production for indoor space heating loads coverage is presented A comprehensive and up to date literature review is presented of non iterative methods for the extraction of the single diode model parameters of photovoltaic modules A prototype custom built two speed gearbox with a single stage transmission electric vehicle achieves significant reductions in the overall energy consumption Two new fuzzy models are presented of high concentrator photovoltaics using the high accuracy Takagi Sugeno Kang approach and the ease

of interpreting the Mamdani linguistic rules Finally the impact of plug in hybrid electric vehicles PHEVs in the primary frequency regulation is studied and the effects of PHEVs in non interconnected isolated power systems with significant renewable energy source RES penetration are demonstrated through simulations of the isolated power system of Cyprus Island
