Brain Metallothionein In Neurological Disorders:

Brain Metallothionein in Neurological Disorders M. Ebadi, 1994-10-01 *Metals and Oxidative Damage in Neurological Disorders* James R. Connor, 2013-06-29 The purpose of this book is to bring together scientists and clinicians interested in oxidative injury in the nervous system but whose approaches to investigation and treatment design vary widely. Indeed the goal of this book is to show that the investigative approaches and potential therapeutic interventions perhaps do not vary as widely as some may think. I think that the readers of this book will not read it from front to back but will pick chapters of interest. Thus the chapters are organized to contain information that is essential to understanding basic aspects of oxidative injury and thus have some redundancy. However within the context of each chapter the reader should hopefully find impetus and direction to go on to another chapter. The book is divided into three sections. The first section contains reviews of metals and their role in generating oxidative injury. Iron is considered in three of these chapters because of its relative abundance in the brain and its potency in inducing free radicals. The second section focuses on mechanisms by which the brain attempts to protect itself from oxidative injury. Some of these mechanisms have the potential to be protective in some situations and potentially damaging in others. The third section contains the clinical diseases in which oxidative injury is known to contribute to the pathogenic process. This section ends with a chapter on antioxidant therapeutic strategies in neurological disorders.

Metallothioneins in Biochemistry and Pathology Paolo Zatta, 2008 Metallothioneins (MTs) represent a large family of proteins characterized by high heavy metal content mainly CuII and ZnII and by an unusual cysteine abundance. They have a powerful protective function in all animal tissues due most likely to their properties as free radical scavengers protecting against oxidative damage. Moreover the presence and overexpression of MTs in various pathological conditions such as metal dyshomeostasis, cell proliferation, neurological disorders and chemotherapy and radiotherapy resistance could be used as an important prognostic marker, as a histopathological diagnostic tool and to follow specific pharmacological treatments. This important book explores the role of MTs in the field of neurological disorders, brain inflammation, Alzheimer's and prion diseases, autism, ALS, etc., cardiology, cardiomyopathy, atherosclerosis and oncology, melanoma, prostate and breast cancer through authoritative contributions and a description of basic biochemical information and paradigmatic pathological events.

Metal Ions and Neurodegenerative Disorders Paolo Zatta, 2003 Numerous studies have established a clear connection between neuronal oxidative stress and several neurodegenerative diseases with consequential damages to lipids, proteins, nucleic acids, etc. In addition, several modifications indicative of oxidative stress have been described in association with neurons, neurofibrillary tangles and senile plaques in Alzheimer's disease, including advanced glycation end products and free carbonyl oxidation. Oxidative damage and antioxidant responses are now well characterized, but sources of damaging free radicals are yet to be fully understood. Evidences of alteration in metal ion metabolism have been reported in various diseases like Alzheimer's, Wilson, Menkes, Prion, Pick, Huntington disease, epilepsy and other pathological events. Thus metal

ions play a pivotal role in neurodegenerative phenomena Chelation therapy is still in the early days of its development but research in this area could lead to new products that could revolutionize treatment Two international conferences on Metals and the Brain From Neurochemistry to Neurodegeneration Padova Italy 2000 and Fez Morocco 2002 were recently held to discuss the role of metal ions in neurophysiopathology A third will be held in 2005 in Johannesburg South Africa This book follows the same train of thought as those conferences in order to highlight the unquestionable importance of metal ions in the research on the neurophysiopathology of neurodegenerative diseases The excellent reputation of the scientists who have contributed to this project ensures the quality of the chapters presented here and hopefully this will help spur new research initiatives in the field which is still in its infancy
