can be created without complex and specialized engineering. It will also be of value to scholars working in the field of history of emotions as it offers evocative descriptions of acoustic atmospheres from diverse cultures and time periods. **Engaging with Everyday Sounds** Marcel Cobussen, 2022-11-30. *Engaging With Everyday Sounds* is a rich and inspiring exploration of the role of sounds in everyday life including their impact on human actions, emotions, and imagination. Marcel Cobussen intertwines sonic studies with philosophy, sound art, sociology, and more to create an impressively lucid and innovative guide to sonic materialism, calling for a re-sensitization to our acoustic environment and arguing that everyday sounds have micro-political, social, and ethical impact to which we should attend. Exploring the intellectual history of sound studies as well as local, global, and temporal sonic geographies, Cobussen weaves audio files, images, and journal excerpts into his work to create a multimodal monograph that explores the relationships of humans, nonhumans, and their environments through sound. This accessible and interdisciplinary collection of short, powerful essays will be valuable reading for both academics and the general reader interested in sound studies, sound art, philosophy, or the sociology of everyday life, and for anyone keen to think about the sonic in new and engaging ways. **Background Noise, Second Edition** Brandon LaBelle, 2015-01-29.

Background Noise follows the development of sound as an artistic medium and illustrates how sound is put to use within modes of composition, installation, and performance. While chronological in its structure, Brandon LaBelle's book is informed by spatial thinking, weaving architecture, environments, and the specifics of location into the work of sound with the aim of formulating an expansive history and understanding of sound art. At its center, the book presupposes an intrinsic relation between sound and its location, galvanizing acoustics, sound phenomena, and the environmental with the tensions inherent in what LaBelle identifies as sound's relational dynamic. For the author, this is embedded within sound's tendency to become public, expressed in its ability to travel distances, foster cultural expression, and define spaces while being radically flexible. This second, expanded edition includes a new chapter on the non-human and subnatural tendencies in sound art, revisions to the text, as well as a new preface by the author. Intersecting material analysis with theoretical frameworks spanning art and architectural theory, performance studies, and media theory, *Background Noise* makes the case that sound and sound art are central to understandings of contemporary culture.

Stereophonica Gascia Ouzounian, 2021-02-16. Episodes in the transformation of our understanding of sound and space from binaural listening in the nineteenth century to contemporary sound art. The relationship between sound and space has become central to both creative practices in music and sound art, and contemporary scholarship on sound. Entire subfields have emerged in connection to the spatial aspects of sound, from spatial audio and sound installation to acoustic ecology and soundscape studies. But how did our understanding of sound become spatial? In *Stereophonica*, Gascia Ouzounian examines a series of historical episodes that transformed ideas of sound and space from the advent of stereo technologies in the nineteenth century to visual representations of sonic environments today. Developing a uniquely interdisciplinary perspective, Ouzounian draws on both the history of science and technology and

the history of music and sound art She investigates the binaural apparatus that allowed nineteenth century listeners to observe sound in three dimensions examines the development of military technologies for sound location during World War I revisits experiments in stereo sound at Bell Telephone Laboratories in the 1930s and considers the creation of optimized acoustical environments for theaters and factories She explores the development of multichannel spatial music in the 1950s and sound installation art in the 1960s analyzes the mapping of soundscapes and investigates contemporary approaches to sonic urbanism sonic practices that reimagine urban environments through sound Rich in detail but accessible and engaging and generously illustrated with photographs drawings maps and diagrams of devices and artworks *Stereophonica* brings an acute imaginative and much needed historical sensibility to the growing literature around sound and space
