The Curious History of Relativity Jean Eisenstaedt, 2018-06-05 Black holes may obliterate most things that come near them but they saved the theory of general relativity Einstein's theory was quickly accepted as the true theory of gravity after its publication in 1915 but soon took a back seat in physics to quantum mechanics and languished for decades on the blackboards of mathematicians Not until the existence of black holes by Stephen Hawking and Roger Penrose in the 1960s after Einstein's death was the theory revived Almost one hundred years after general relativity replaced Newton's theory of gravitation *The Curious History of Relativity* tells the story of both events surrounding general relativity and the techniques employed by Einstein and the relativists to construct develop and understand his almost impenetrable theory Jean Eisenstaedt one of the world's leading experts on the subject also discusses the theory's place in the evolution of twentieth century physics He describes the main stages in the development of general relativity its beginnings its strange crossing of the desert during Einstein's lifetime while under heated criticism and its new life from the 1960s on when it became vital to the understanding of black holes and the observation of exotic objects and eventually to the discovery of the accelerating universe We witness Einstein's construction of his theory as well as the work of his fascinated discouraged and enthusiastic colleagues physicists mathematicians and astronomers Written with flair *The Curious History of Relativity* poses and answers the difficult questions raised by Einstein's magnificent intellectual feat [The New Encyclopædia Britannica: Macropædia](#), 1993 This encyclopedia includes a two volume index a 12 volume Micropaedia Ready reference a 17 volume Macropaedia Knowledge in depth and the Propaedia ***The New Encyclopaedia Britannica: Macropaedia : Knowledge in depth***, 2003 ***The Ontology of Spacetime II***, 2008-06-17 The sixteen papers collected in this volume are expanded and revised versions of talks delivered at the Second International Conference on the Ontology of Spacetime organized by the International Society for the Advanced Study of Spacetime John Earman President at Concordia University Montreal from 9 to 11 June 2006 Most chapters are devoted to subjects directly relating to the ontology of spacetime The book starts with four papers that discuss the ontological status of spacetime and the processes occurring in it from a point of view that is first of all conceptual and philosophical The focus then slightly shifts in the five papers that follow to considerations more directly involving technical considerations from relativity theory After this Time Becoming and Change take centre stage in the next five papers The book ends with two excursions into relatively uncharted territory a consideration of the status of Kaluza Klein theory and an investigation of possible relations between the nature of spacetime and condensed matter physics respectively Space and time in present day physics and philosophy Relatively low level of technicality easily accessible Introduction from scratch of the debates surrounding time Broad spectrum of approaches coherently represented [Democracy in a Technological Society](#) L. Winner, 2013-03-09 This ninth volume is one of the most ambitious in the Philosophy and Technology series Edited by technopolitical philosopher Langdon Winner it assembles an impressive collection of

philosophers and political theorists to discuss one of the most important topics of the end of the twentieth century the bearing of technology in all its ramifications on the practice of democratic politics in the developed world When set beside the previous volume in the series Europe America and Technology the two together open a philosophical dialogue of great significance about the ways technology challenges democracy at its very roots Some philosophers think the attack is fatal Others are optimistic that democratic means can be discovered or invented for the control of technology Still others object to an optimism versus pessimism formulation of the issue But all agree that the issue is highly significant one that demands serious philosophical inquiry The Society for Philosophy and Technology was fortunate in being able to draw this group of writers to Bordeaux France in 1989 along with a large number of others whose contributions to the debate could not be included here It is equally fortunate to have chosen Langdon Winner as president when the time came to select the best of the papers to fashion this volume University of Delaware PAUL T
