Aliphatic Chemistry A. McKillop, 1977-11 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles; some have been combined under a new name, whereas others have had to be discontinued. Chemistry and Industry, 1978 Methods for the Determination of Organic Compounds in Drinking Water, 1992 Waste Testing and Quality Assurance David Friedman, 1990. Annotation: Thirty-three papers address waste and environmental media sampling, property and hazard assessment, chemical and biological analysis, estimating migration of hazardous constituents from wastes, analytical methods development and evaluation, laboratory data management and quality assurance. Buglass, 2011-02-14 **HANDBOOK OF ALCOHOLIC BEVERAGES** A comprehensive two-volume set that describes the science and technology involved in the production and analysis of alcoholic beverages. **HANDBOOK OF ALCOHOLIC BEVERAGES** Technical, Analytical and Nutritional Aspects. At the heart of all alcoholic beverages is the process of fermentation, particularly alcoholic fermentation, whereby sugars are converted to ethanol and many other minor products. The Handbook of Alcoholic Beverages tracks the major fermentation process and the major chemical, physical and technical processes that accompany the production of the world's most familiar alcoholic drinks. Indigenous beverages and small-scale production are also covered to a significant extent. The overall approach is multidisciplinary, reflecting the true nature of the subject. Thus aspects of biochemistry, biology, including microbiology, chemistry, health science, nutrition, physics and technology are all necessarily

involved but the emphasis is on chemistry in many areas of the book Emphasis is also on more recent developments and innovations but there is sufficient background for less experienced readers The approach is unified in that although different beverages are dealt with in different chapters there is extensive cross referencing and comparison between the subjects of each chapter Appropriate for food professionals working in the development and manufacture of alcohol based drinks as well as academic and industrial researchers involved in the development of testing methods for the analysis and regulation of alcohol in the drinks industry Divided into five parts this comprehensive two volume work presents INTRODUCTION BACKGROUND AND HISTORY a simple introduction to the history and development of alcohol and some recent trends and developments FERMENTED BEVERAGES BEERS CIDERS WINES AND RELATED DRINKS the latest innovations and aspects of the different fermentation processes used in beer wine cider liqueur wines fruit wines low alcohol and related beverages SPIRITS covers distillation methods and stills used in the production of whisky cereal and cane based spirits brandy fruit spirits and liqueurs ANALYTICAL METHODS covering the monitoring of processes in the production of alcoholic beverages as well as sample preparation chromatographic spectroscopic electrochemical physical sensory and organoleptic methods of analysis NUTRITION AND HEALTH ASPECTS RELATING TO ALCOHOLIC BEVERAGES includes a discussion on nutritional aspects both macro and micro nutrients of alcoholic beverages their ingestion absorption and catabolism the health consequences of alcohol and details of the additives and residues within the various beverages and their raw materials
