Brain Structure Learning And Memory:

Brain Structure, Learning, And Memory Joel Lance Davis, 2019-04-23 In science a few areas particularly capture the imagination because of a combination of excitement substantial technical progress and implicit significance in affecting the nature and quality of life Perhaps no area of science exhibits these characteristics more abundantly than that dealing with the brain Once shrouded in the mystical studies in modern brain science are dramatically enhancing our understanding of brain function and its impact on learning and memory It is perhaps the union of pragmatic and mystical aspects that makes this such an exciting arena of science The Office of Naval Research ONR began an intensive effort in 1983 on the topic of the neural basis for learning and memory This effort was aimed at providing the scientific understanding of how learning takes place It is the expectation that a neurological understanding of learning processes will lead to the formulation of learning strategies that will significantly enhance performance This is important in a civilian and military population faced with serious manpower problems requiring a few individuals to be more expert with technologically intensive systems With these motivations in mind two of us EJW and RN formulated a full day symposium at the AAAS annual meeting held in New York May 1984

Learning in Natural and Connectionist Systems R.H. Phaf, 2012-12-06 Modern research in neural networks has led to powerful artificial learning systems while recent work in the psychology of human memory has revealed much about how natural systems really learn including the role of unconscious implicit memory processes Regrettably the two approaches typically ignore each other This book combining the approaches should contribute to their mutual benefit New empirical work is presented showing dissociations between implicit and explicit memory performance Recently proposed explanations for such data lead to a new connectionist learning procedure CALM Categorizing and Learning Module which can learn with or without supervision and shows practical advantages over many existing procedures Specific experiments are simulated by a network model ELAN composed of CALM modules A working memory extension to the model is also discussed that could give it symbol manipulation abilities The book will be of interest to memory psychologists and connectionists as well as to cognitive scientists who in the past have tended to restrict themselves to symbolic models
